## **WHAT IS APTA?**

File:APTA

APTA is the American Public Transportation Association. Originally founded more than one hundred years ago, APTA is a nonprofit international association of more than 1,270 organizations responsible for planning, designing, constructing, financing, and operating public transportation systems. In addition, APTA members include business organizations that supply products and services to the public transportation industry, as well as academic institutions, state associations, metropolitan planning organizations and departments of transportation. Over 90 percent of persons using public transportation in the United States and Canada are carried by APTA members. APTA is governed by a Board of Directors representing the diverse membership of the organization and an 18-member executive committee of public transportation leaders, elected annually by the entire APTA membership. APTA members provide safe, efficient and cost-effective public transportation services and products that enhance the quality of life in our communities by improving transportation choices, congestion reduction, economic development, a cleaner environment, and mobility opportunities. APTA's mission is to serve and lead its diverse membership through advocacy, innovation, and information sharing to strengthen and expand public transportation.

### **APTA's Vision Statement**

Be the leading force in advancing public transportation.

### **APTA's Mission Statement**

APTA serves and leads its diverse membership through advocacy, innovation, and information sharing to strengthen and expand public transportation.

**AMERICAN  
PUBLIC  
TRANSPORTATION  
ASSOCIATION**

## Notes

File: NOTES

The Public Transportation Fact Book (formerly the Transit Fact Book) was first published in 1943. Available data are expanded by standard statistical methods to estimate U.S. national totals. *All data are for the U.S. only, except for the section on Canada.* Data for Canada were provided by the Canadian Urban Transit Association (CUTA).

This book includes only public transportation data and excludes taxicab, unregulated jitney, school, sightseeing, intercity, military, and non-public service (e.g., governmental and corporate shuttles), and special application systems (e.g., amusement parks, airports, and international, rural, rural interstate, island, and urban park ferries).

Data are based on the annual National Transit Database (NTD) report published by the United States Government's Federal Transit Administration (FTA). APTA supplements these data with special surveys. Where applicable, data are calculated based on 1990 U.S. Census Bureau urbanized area population categories; in prior decades, urbanized areas designated by 1980 and 1970 censuses are used.

The number of employees is based on the concept of employee equivalents where each employee equivalent is equal to 2,080 labor hours. Beginning in 1993, the number of employees is based on the actual number of persons at the end of the fiscal year. Data are not continuous between 1992 and 1993.

Federal government funding data are based on reports prepared by the United States Department of Transportation.

Because of the time required to compile the large amount of data for this book, data for the last calendar year reported are preliminary and will be refined when additional data become available.

Many of the tables in this book will be updated prior to the next edition. See APTA's web site, [www.apta.com](http://www.apta.com), under "Statistics," under the appropriate subject for updated data.

## SECTION I

File:SUMMARY

## Summary

### What is Public Transportation?

Public transportation includes all multiple-occupancy vehicle services designed to transport customers on local and regional routes. These services are: private and public buses; rail; ferryboats; Amtrak, intercity bus, and taxi services operated under contract to a public transportation agency; any vanpool service operated by or under such a contract; and other transportation services for senior citizens and persons with disabilities.

### Public Transportation's Customers

How many people use public transportation? In 1999, Americans took 9.1 billion trips using public transportation, an increase of 4.5 percent more than the previous year, outpacing growth in other travel modes. In 1999, public transportation ridership grew twice as fast as the U.S. population; exceeded an increase in car travel (2 percent), and growth in domestic air travel (3 percent). In 1999, public transportation ridership increased for the fourth straight year. This level of usage amounts to an increase of nearly 20 percent since 1995. The equivalent of more than a million new trips on public transportation were added each day in 1999.

Passengers waiting to board Dallas Area Rapid Transit light rail trains in Texas.

APTA estimates that 14 million Americans rode on public transportation each weekday on 1999. The U.S. Department of Transportation estimates another 25 million use public transportation less frequently but on a regular basis. Within any given two-month period, nearly 12 percent of the national population uses public transportation, according to the 1995 National Personal Transportation Survey (NPTS). In the largest U.S. cities, 21 percent of the public or 28 million people use public transportation at least once in a typical two-month period. Ridership is also highest in large cities, during peak travel periods and for work trips.

Why do people use public transportation? Public transportation provides opportunities for people from every walk of life by making transportation choices and options available. Public transportation provides people with easy access to services and places important in everyday life. Access to public transportation gives people mobility, choice and freedom to accomplish what is important to them.

*For everyone, including these Southeastern Pennsylvania Transportation Authority riders in Philadelphia, public transportation is there when it's needed by providing opportunities, freedom, and mobility.*

Where do people go on public transportation? According to APTA data, work is the most popular destination with 54 percent of all trips ending at workplaces. Next, 15 percent of trips go to schools; 9 percent to shop; 9 percent, social visits; and 5.5 percent, medical appointments.

As the type of the trip varies on public transportation, so does the average distance traveled. Vanpool customers take the longest trips (34.4 miles). Next, commuter rail, 22.1 miles; demand response, 8.1 miles; ferryboat, 5.8 miles; heavy rail, 5.1 miles; light rail, 4.1 miles; bus, 3.8 miles; and other modes, 1.6 miles or less.

Many different types of people ride public transportation. Data collected by APTA shows the diversity of public transportation's customers. People age 65 and older represent 7 percent of riders; 18 years and under, 10 percent; women, 52 percent; White, 45 percent; African-American, 31 percent; Hispanic, 18 percent; and Asians and Native Americans, 6 percent.

Public transportation users come from all household income levels. The majority of passengers fall in the income range of \$15,000 to \$50,000; below \$15,000, 27 percent; more than \$50,000, nearly 20 percent.

The U.S. Department of Transportation's 1995 National Personal Transportation Survey estimated that 8 million of the 100 million U.S. households did not own a car, truck, van, motorcycle, or motor scooter. An additional 30 million households owned only one vehicle.

### **Public Transportation Modes**

Modes are different ways to get around on public transportation. Road modes include bus, trolleybus, vanpool, jitney, and demand response service. Rail modes include heavy rail, light rail, commuter rail, automated guideway transit, inclined plane, cable car, monorail, and aerial tramway. Water modes include ferryboat. An explanation of each mode is found in the definitions section.

*The Syracuse, New York CNY Centro system uses this typical demand response vehicle to transport disabled persons unable to use its fixed route buses.*

## **Number of Providers**

Approximately 6,000 public transportation systems operate in the U.S. and Canada. The majority of these agencies operate more than one mode of service. An estimated 2,250 agencies provide bus service, 5,200 operate demand response service, and 150 operate other modes. Two-thirds of U.S. public transportation agencies provide service designed to meet the needs of senior citizens and persons with disabilities. Also, many agencies typically contract service with private operators, further increasing the number of total public transportation providers.

## **Fixed Guideways**

Rail service operates on a separate right-of-way known as a fixed guideway. Rail fixed guideway route mileage is divided among commuter rail (3,823 miles), heavy rail (1,269), light rail (439), and other modes (29).

In 2000, 135 miles of commuter rail, 71 miles of light rail, 28 miles of heavy rail, and 9 miles of automated guideway were under construction.

Bus services on restricted busways and high-occupancy-vehicle lanes and trolleybus services, are also fixed guideway services.

In 1999, 966 route miles of bus fixed guideway were in operation at all times, and another 789 operated only part of the day. For trolleybus, 160 miles operated at all times, and 270 part of the day.

By law, ferryboat services are also considered fixed guideway—there are over 400 route miles of ferryboat service.

## **The Public Sector's Investment in Public Transportation**

In fiscal year 2001, the fourth year of funding under the Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21), the federal investment in public transportation is \$6.3 billion. TEA-21 funding provides the federal resources to ensure that public transportation remains safe and in good condition. Financial support by federal, state and local governments also helps people make a choice among travel modes. Public expenditures to operate, maintain and invest in public transportation systems in America amount to \$15.4 billion each year, according to the 1997 study "Dollars and Sense: The Economic Case for Public Transportation in America," by the Campaign for Efficient Passenger Transportation. These expenditures have a positive and high return on the public investment made by taxpayers. The study reports that the estimated mobility and

efficiency benefits of public transportation have a value between \$62 billion and \$78 billion annually, increasing the economic return on the public's dollars by nearly six times the total annual investment of \$15.4 billion (1995 dollars).

But unmet needs still exist in public transportation. According to the U.S. Department of Transportation, in today's dollars, \$17 billion is needed annually to maintain and improve performance of the nation's transit systems.

## **Growing Investment Needs**

The nation's transportation systems are showing signs of stress. In early 2001, the American Society of Civil Engineers (ASCE) released a "report card" on the nation's infrastructure. Since 1998, the last year ASCE issued the report card, public transportation received a reduced grade, or a "C Minus" from a "C." The ASCE report finds that improvements to transit bus and rail facilities are not keeping up with the strain placed on transit systems by increased ridership. In addition, the report predicted that transit is expected to experience the sharpest growth of any form of transportation this decade. The ASCE report also finds that spending on public transportation must increase by 41 percent to maintain current conditions.

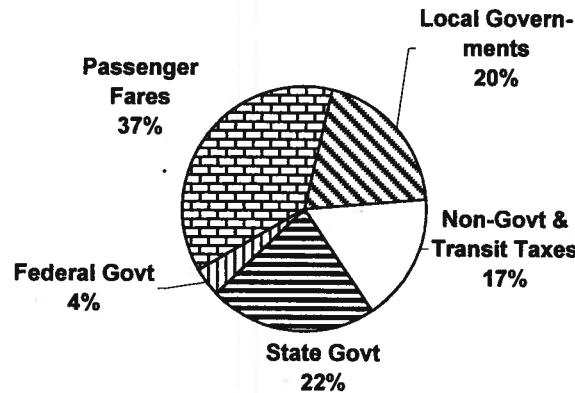

## **What it Costs to Operate Public Transportation**

Public transportation funds come from two main sources, capital and operating. Capital funds are used to finance infrastructure needs such as new construction and rehabilitation of existing facilities. The federal government contributes 44 percent of all capital funding for public transportation. Up to 80 percent of the total capital cost may be federally funded. The balance is typically paid for by a combination of state and local funds; many state and local governments provide more than the required minimum 20 percent of matching funds. In many cases, capital projects are financed solely by state and local funds. Public transportation agencies raise 33 percent of capital funds from taxes levied by the transportation system, tolls, fees, and non-governmental sources. States contribute 10 percent; local governments, 13 percent.

In 1999, public transportation received a total of \$9.0 billion in capital funds from all sources. Bus-related projects received 43 percent; fixed guideway modernization, 37 percent; new start transit projects, 19 percent, and 2 percent for planning.

Operating funds provide income for operational expenses. Most operating funds originate from local sources (74 percent). Passenger fares pay for 37 percent of operating expenses, local governments contribute 20 percent, and non-governmental sources and taxes levied by the transportation system, tolls and fees, 16 percent. State and federal governments contribute 22 percent and 4 percent, respectively.

## Operating Funds

In 1999, an adult passenger paid an average of \$1.09 in base cash fare when riding on public transportation. Zone and other surcharges increase the amount paid in many areas. Because children, senior citizens, and persons with disabilities usually ride free or at half-fare, and others use discounted passes and tickets, the average fare for an unlinked or single trip is often less. For example, passengers pay \$0.50 for trolleybus, \$0.56 for light rail, \$0.74 for bus, \$0.92 for heavy rail, \$1.59 for demand response, and \$3.31 for commuter rail.

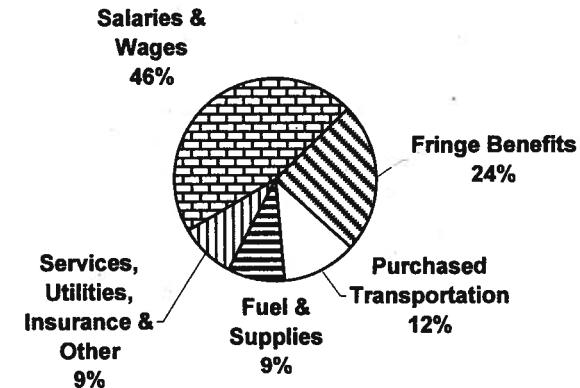

It takes regular capital and operating investments to keep public transportation on the move. **Capital expenses** represent money set aside for infrastructure and rolling stock and their renovation and replacement, plus planning, design, land acquisition and related costs. In 1999, public transportation invested \$9.0 billion in capital needs. Facilities cost 52 percent; vehicles, 36 percent; and equipment and services, 12 percent. Of these categories, heavy rail expenses accounted for 30 percent; bus, 36 percent; commuter rail, 18 percent; and light rail, 11 percent.

*Among the capital projects constructed in recent years is this massive MTA Long Island Rail Road train storage yard west of Penn Station in New York City.*

In 1999, public transportation spent \$20.5 billion on **operating expenses**. Salaries and wages cost 46 percent; fringe benefits, 25 percent; purchased transportation, 12 percent; and fuel and supplies, 9 percent. Services, utilities, insurance and other costs fill out the operating expense list. Of the money used to operate and maintain the vehicles used in revenue service, scheduling and operation of revenue vehicles represent 46 percent; vehicle maintenance, 18 percent; non-vehicle maintenance, 9 percent; purchased transportation, 12 percent; and 15 percent, general administration.

## Operating Expenses

## Employees

In 1999, the nation's 350,000 public transportation employees provided services to the highest levels of passengers since the inception of the federal transit program. These employees operate, maintain and manage all modes of public transportation. The majority of employees, or 60 percent, work in bus service, followed by 15 percent in demand response, 14 percent in heavy rail, and 7 percent in commuter rail.

A bus operator at Pace Suburban Bus outside Chicago takes time to share a special moment with a young passenger.

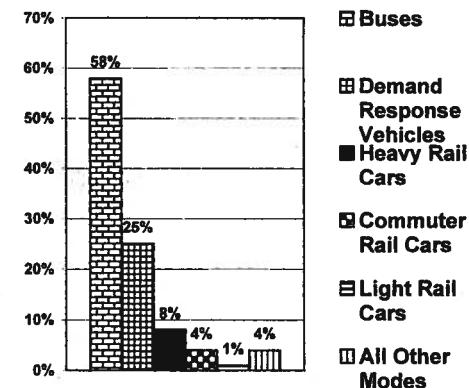

A full 50 percent of the total number of public transportation employees serve as operators or conductors on board vehicles. Other vehicle operations employees represent 14 percent, vehicle maintenance personnel, 17 percent; non-vehicle maintenance, 9 percent; and administration, 10 percent.

In addition, an estimated 10,000 - 20,000 professionals work under contract to public transportation systems or are employed by engineering firms, manufacturers of public transportation equipment, consultants, local governments and private businesses.

## Vehicles

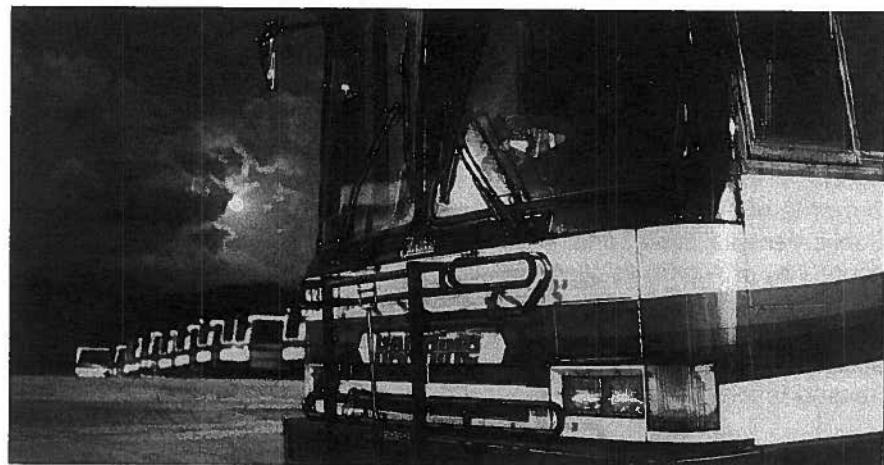

The public transportation fleet is comprised of 129,000 vehicles in active service. Of this number, buses represent 58 percent; demand response vehicles, 25 percent; heavy rail cars, 8 percent; commuter rail cars, 4 percent; light rail cars, 1 percent; and all other modes, 5 percent.

## Vehicles

The age of vehicles varies by mode and by each agency that operates them. The average age for buses is 7.3 years; demand response vehicles, 2.6 years; commuter rail vehicles, 20.2 years; heavy rail vehicles, 21.3 years; and light rail vehicles, 17.8 years.

The length of vehicles varies by mode. For example, although the standard length of a bus is 40 feet, vehicles range from 15 to 65 feet long. The average length of a bus is 39.2 feet; demand response vehicles, 21.5 feet; commuter rail cars, 85.0 feet; heavy rail cars, 61.6 feet; and light rail cars, 72.3 feet. Vanpool vehicles are more compact at 17.5 feet. Ferryboats are the longest at 232.3 feet.

The sun sets on the fleet of the Hillsborough Area Regional Transit Authority after a long day of providing bus service for Tampa, Florida residents.

## **Energy Consumption**

In 1999, public transportation vehicles used nearly 856 million gallons of fossil fuels and 5.2 billion kilowatt-hours of electricity, less than 1 percent of all energy consumed in the U.S.

Among fossil fuels, diesel ranked as the highest consumed at 89 percent. Top users of diesel fuel are buses, 81 percent; commuter rail at 10 percent; demand response, 6 percent; and ferryboats, 4 percent. Among the non-diesel fuels, vehicles also used fossil fuels such as gasoline (35 percent), compressed natural gas (48 percent), propane (6 percent), and liquified natural gas (8 percent).

Most electricity, 65 percent, is consumed by heavy rail vehicles; commuter rail, 25 percent; and light rail, 8 percent.

*This compressed natural gas bus is operated by the Sacramento Regional Transit District in California.*

## **Benefits of Public Transportation**

Public transportation benefits the quality of life in communities across the country by providing safe, efficient and economical transportation service. Importantly, public transportation is also a vital component for a healthy economy. While public transportation benefits the people who use it, society in general benefits from its availability. Investing in public transportation:

### **Saves Money:**

For most people, public transportation saves money. It is more cost efficient to use public transportation, especially to the central business district of an urban area.

The American Automobile Association in 1998 estimated annual costs for driving a single-occupant vehicle at \$4,826 for a small car and as high as \$9,685 for large car, depending on mileage driven.

Annual costs for public transportation may range from \$200 to \$2,000 depending on mileage traveled and include transfer, distance or zone, time-of-day, express, and parking charges.

A 1999 study, *"Public Transportation and the Nation's Economy,"* by Cambridge Systematics, Inc., estimated that for every \$10 million invested in public transportation, more than \$15 million is saved in transportation costs to both highway and public transportation users. These include operating, fuel and congestion costs.

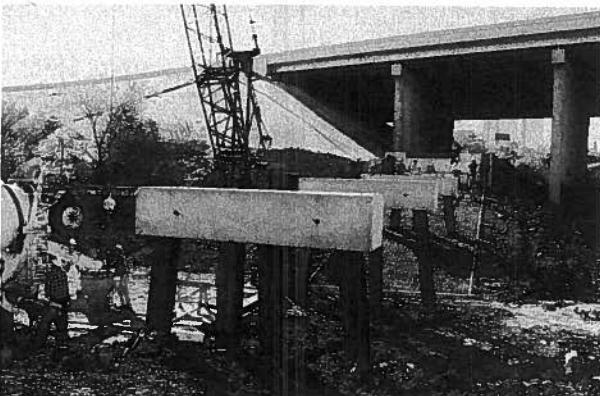

**Creates Jobs:** The public transportation industry creates jobs for the nation's economy. In addition to the 350,000 people directly employed by the public transportation industry and thousands of others employed in the directly related engineering, construction, manufacturing and retail industries, other jobs are created. For every \$10 million invested in capital projects for public transportation, more than 300 jobs and a \$30 million gain in sales for business are realized, according to the 1999 Cambridge Systematics study.

**Provides Access to Jobs:** During the 1990s, federal and state governments took steps toward moving people off welfare and into the workforce. At the same time, a healthy economy has created thousands of new jobs. Transportation is a key force in moving former welfare recipients into the workforce as permanent wage earners. APTA's 1999 *Access to Work Best Practices Survey* reveals that an estimated 94 percent of welfare recipients attempting to move into the workforce do not own cars and rely on public transportation.

Under the current \$75 million federal access to jobs initiative, public transportation systems around the nation cooperatively work with state and local social service agencies to coordinate services to identify and assess mobility needs and to improve employment accessibility in their region. These new and expanded services will provide access to jobs for 8 million households without a car. TEA-21 guarantees \$500 million for these programs for a five-year period.

**Stimulates Economic Development:** New analysis confirms the important and positive economic impact of public transportation investment on new development and business revenues. The Cambridge Systematics study estimated that each \$10 million in capital investment yields \$30 million in increased sales, while each \$10 million

operating investment yields \$32 million. The net return on the public investment is as high as six to one.

Communities throughout the country are spurring economic development by investing in public transportation projects like this commuter rail system in Dallas/Ft. Worth, Texas. This investment pays off with a return that is as high as 6 to 1.

**Ease Traffic Congestion:** Public transportation helps to alleviate the crowded conditions on our nation's increasingly crowded network of roadways. The amount of time car drivers spent stuck in traffic grew to more than 40 hours in a year, in one-third of the cities studied by the 1999 *Texas Transportation Institute (TTI) Annual Mobility Report*. Also, drivers in half of the cities studied spent at least half as much time stuck in traffic as they did on vacation each year. These findings apply to small-to-medium sized cities as well as larger metropolitan areas.

The answer to more congestion is not building more roads. If adding more roads represented the only option, each of the cities in the TTI study would require an average of 37 more lane miles to keep pace with one year of increased traffic demand.

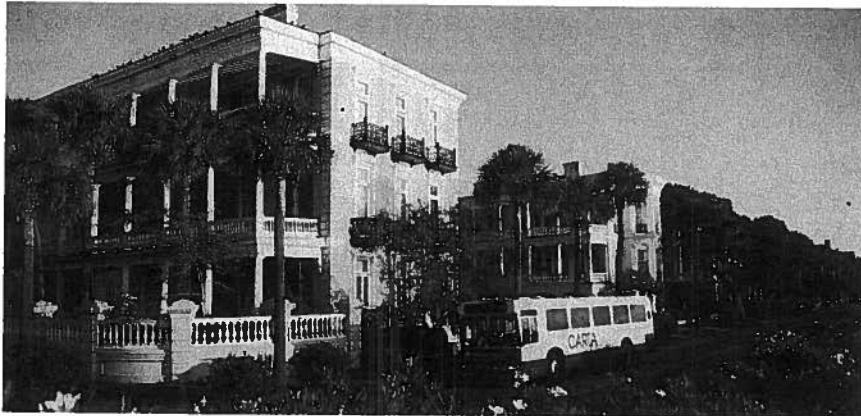

More Americans perceive traffic congestion as a growing problem. Recent public opinion polls suggest that nearly half of Americans believe that traffic is a serious problem where they live, especially among suburban residents. Most people (57 percent) do not feel their commute will get better over the next three years, and nearly a quarter (24 percent) feel they will spend more time commuting, according to recent public opinion polls. (Transit Cooperative Research Program Report #63, "Enhancing the Visibility and Image of Transit in the United States and Canada")

This Toronto GO Transit train carries 1,600 passengers. If they all drove instead, the adjacent freeway would be totally gridlocked.

**Fosters More Livable Communities:** Public transportation is a catalyst to strengthen community life through partnering with cities, small towns, and rural areas. These partnerships create transportation systems that enhance the quality of life. Public transportation's successful partnerships with communities bring together both the goals of transportation systems and the livability goals of communities, according to a Project for Public Spaces, Inc., report *"How Transportation and Community Partnerships are Shaping America."* Public transportation facilities and transportation corridors are "natural focal points for communities" for economic and social activities that help create strong neighborhood centers that are more economically stable, safe, and productive. These are areas where people can drive less or walk. When commuters ride public transportation or walk, face-to-face contact with neighbors tends to increase, which works to bring a community closer.

In the recent "Transportation for Livable Cities" by Vukan R. Vuchic, Professor of Transportation at the University of Pennsylvania, the author dispels the myth that automobile-based transportation provides freedom of choice and maximum mobility. The availability of public transportation in a community provides mobility and accessibility for all people, according to Vuchic. Transportation systems in urban areas with integrated, multimodal transportation options provide more trip choices and increase the ability to travel between activities. Vuchic believes that the ability to travel in an area conveniently, without a car, is an important component of an area's livability.

*The Charleston Area Regional Transportation Authority in South Carolina helps move both residents and tourists through Charleston's quaint streets.*

**Boosts Real Estate Values:** Public transportation fuels local development and in turn impacts local property values. For example, in the case of developments near the light rail system in Dallas, Texas, a 1999 University of North Texas study found that taxable values of properties located near Dallas Area Rapid Transit (DART) stations jumped by 25 percent between 1994 and 1998, as compared to values in neighborhoods not located near rail stations.

**Improves Air Quality:** Public transportation enables people to conserve energy and promote cleaner air. A 1996 FTA study reports that each year, America's public transportation use avoids the emission of more than 126 million pounds of hydrocarbons, a primary cause of smog, and 156 million pounds of nitrogen oxides, that can cause respiratory disease. Public transportation vehicles help reduce air pollution. For every mile traveled, less pollutants are emitted than by a single-passenger automobile. For example, buses emit 80 percent less carbon monoxide than single-occupant automobiles and rail transportation emits almost no carbon monoxides. Public transportation also reduces auto-fuel consumption by 1.5 billion gallons annually, according to the FTA study. Some transit systems around the country are reducing reliance on diesel fuel for their bus fleets and investing in compressed natural gas vehicles, buying low-sulfur fuel-burning buses or planning a switch to diesel-electric hybrid buses. Other systems are replacing aging diesel buses with new ones to reduce emissions.

**Reduces Energy Consumption:** Public transportation can significantly reduce dependency on gasoline. For example, switching to public transportation, a person commuting 60 miles each way on a daily basis,

using a car that travels 15 miles per gallon (m.p.g.) could save an estimated 1,888 gallons of gasoline each year. At 30 m.p.g, the savings amount to 944 gallons.

For a 40-mile trip, 1,259 gallons would be saved at 15 m.p.g. or 629 gallons at 30 m.p.g. Even switching to public transportation for a shorter 5-mile commute each way can save 157 gallons at 15 m.p.g. or 79 gallons at 30 m.p.g.

**Ensures Safety:** Public transportation continues to be one of the safest modes of travel in the U.S. Safe travel is a high priority of public transportation systems, federal, state and local governments and APTA. According to the National Safety Council, riding a transit bus is 91 times safer than car travel. By train, customers are 15 times safer than traveling by car.

The public transportation industry and APTA continue to promote partnerships in safety. During 1999-2000, a record 53 public transportation systems participated in the rail, commuter rail or bus safety audit programs offered by APTA. These comprehensive programs are designed to examine every area of operations to ensure the safety of public transportation passengers.

#### Why Is Public Transportation So Safe?

- Transit vehicle operators are highly trained to drive defensively and anticipate potential safety problems.
- Public transportation vehicles are generally much larger and more substantially built than personal automobiles or vans.
- Most people on rail cars and busways travel on separate rights-of-way. Light rail, commuter rail and cable cars encounter grade crossings, many of which are protected by crossing gates.
- Passengers ride approximately 3-4 feet above the ground, offering protection from the most common area of impact.

**Enhances Mobility During Emergencies:** During many types of crisis conditions, including bad weather, people rely on public transportation as a valued service. For example, in 1998, when a tornado made an unprecedented visit to Nashville, Tennessee, public transportation services helped with evacuations and emergency transportation. Also, in 1998, public transportation provided invaluable service in the Daytona Beach, Florida area when parts of Volusia County were ravaged by wildfires. Public transportation vehicles operated around the clock to transport firefighters to the site of the wildfires; to evacuate nursing

homes, adult day care facilities, and hospitals; and to bring out-of-town firefighters from the airport.

More recently, local transit systems across North Carolina offered direct assistance to the victims of Hurricane Floyd in September 1999, by evacuating and rescuing hundreds of residents during and after the hurricane. In August 1999, Calgary Transit provided immediate and vital assistance to evacuate residents of southeast Calgary when a nearby oil recycling plant was consumed by fire after more than 40 explosions erupted at the site. In November 1999, the Mass Transportation Authority of Flint, Michigan successfully evacuated residents and employees of a senior citizens housing complex after a gas explosion destroyed the facility.

## SECTION II

# **Profile of U.S. Public Transportation**

**TABLE 1**

*File: AGENCIES*

## **Number of Transit Agencies by Mode**

MODE	NUMBER
Aerial Tramway	1
Automated Guideway Transit	5
Bus	2,262
Cable Car	1
Commuter Rail	20
Demand Response	5,252
Ferryboat (b)	30
Heavy Rail	14
Inclined Plane	5
Light Rail	24
Monorail	2
Trolleybus	5
Vanpool	67
<b>TOTAL (a)</b>	<b>6,000</b>

(a) Total is not sum of all modes since many agencies operate more than one mode.

(b) Excludes international, rural, rural interstate, island, and urban park ferries.

TABLE 2

**35 Largest Transit Agencies, Fiscal Year 1999,  
Ranked by Number of Unlinked Passenger Trips**

RANK	TRANSIT AGENCY	URBANIZED AREA
1	Metropolitan Transportation Authority (includes MTA New York City Transit, MTA Long Island Rail Road, MTA Metro-North Railroad, MTA Long Island Bus, and MTA Staten Island Railway)	New York, NY
2	Regional Transportation Authority (includes Chicago Transit Authority, Northeast Illinois Regional Commuter Railroad Corporation, and PACE Suburban Bus)	Chicago, IL
3	Los Angeles County Metropolitan Transp Authority	Los Angeles, CA
4	Washington Metropolitan Area Transit Authority	Washington, DC
5	Massachusetts Bay Transportation Authority	Boston, MA
6	Southeastern Pennsylvania Transp Authority	Philadelphia, PA
7	San Francisco Municipal Railway	San Francisco, CA
8	New Jersey Transit Corporation	New York, NY
9	Metropolitan Atlanta Rapid Transit Authority	Atlanta, GA
10	New York City Department of Transportation	New York, NY
11	Mass Transit Administration, Maryland Dept of Trp	Baltimore, MD
12	Metropolitan Transit Authority of Harris County	Houston, TX
13	King County Department of Transportation	Seattle, WA
14	San Francisco Bay Area Rapid Transit District	San Francisco, CA
15	Tri-County Metropolitan Transp District of Oregon	Portland, OR
16	Miami-Dade Transit Agency	Miami, FL
17	San Diego Metropolitan Transit Development Board (includes San Diego Transit Corporation and San Diego Trolley)	San Diego, CA
18	Port Authority of Allegheny County	Pittsburgh, PA
19	Port Authority of New York and New Jersey	New York, NY
20	Regional Transportation District	Denver, CO
21	Metro Transit	Minneapolis, MN
22	Milwaukee County Transit System	Milwaukee, WI
23	Dallas Area Rapid Transit Authority	Dallas, TX
24	Greater Cleveland Regional Transit Authority	Cleveland, OH
25	City & County of Honolulu Dept of Transp Services	Honolulu, HI
26	Alameda-Contra Costa Transit District	San Francisco, CA
27	Regional Transit Authority of Orleans and Jefferson	New Orleans, LA
28	Orange County Transportation Authority	Los Angeles, CA
29	Santa Clara Valley Transportation Authority	San Jose, CA
30	Regional Transportation Comm of Southern Nevada	Las Vegas, NV
31	Bi-State Development Agency	Saint Louis, MO
32	VIA Metropolitan Transit	San Antonio, TX
33	City of Detroit Department of Transportation	Detroit, MI
34	Capital Metropolitan Transportation Authority	Austin, TX
35	Connecticut Transit	Hartford, CT

(a) Fixed guideways are vehicle lanes reserved for transit use and/or other high-occupancy vehicles. Exclusive ROW (right-of-way) are reserved at all times; controlled ROW only part of the time--usually just during peak hours. Some double-counting occurs when more than one transit agency uses the same fixed guideway.

Source: Federal Transit Administration, National Transit Database.

*The pleasantly landscaped 16<sup>th</sup> Street Mall in Denver, Colorado exemplifies a type of fixed guideway common in the central business districts of larger cities. Buses of the Regional Transportation District shuttle constantly between the two end stations of the mile-long mall.*

SECTION III**Funding, Capital***Highlights. . . . .*

- \$9.0 billion was received from all sources in 1999.
- 44.1% came from the federal government,  
10.2% from state governments,  
12.6% from local governments,  
33.1% was raised by transit agencies from directly-levied taxes, advertising, interest income, and other sources.
- Federal capital and operating appropriations totaled \$6.3 billion for 2001.
- Federal capital and planning grant approvals for 1999 totaled \$5.4 billion.
- 42.6% went for bus-related projects,  
37.0% for fixed-guideway modernization,  
18.5% for new start transit projects,  
1.9% for planning projects.

TABLE 7

**Capital Funding Sources, Millions of Dollars**

YEAR	FEDERAL ASSISTANCE	STATE ASSISTANCE	LOCAL ASSISTANCE	DIRECTLY GENERATED (a)	LOCAL PLUS DIRECTLY GENERATED	TOTAL
1988	2,519.5	489.6	769.0	86.5	855.5	3,864.6

**SECTION IV****Expenses, Capital**

Tunnel construction for a heavy rail line at the Washington Metropolitan Area Transit Authority. Some tunnels are bored deep underground by special machines. This one employs the cut-and-cover method--digging a trench, building the tunnel, and then covering it up.

*Highlights. . . . .*

- \$9.0 billion was spent in 1999.
- 36.1% was used for rolling stock,  
52.3% for facilities,  
11.6% for other capital expenses.
- 36.2% was used for bus projects,  
18.1% for commuter rail,  
30.2% for heavy rail,  
11.2% for light rail,  
4.3% for other modes.

## Notes on Capital Costs

File: CAPCOST

Capital expense costs reported to the Federal Transit Administration exclude expenses of purchased transportation contractors. Data in the following tables include APTA estimates for such expenses.

Because most capital projects take several years to complete, and data are reported each year as spent, it is not possible to correlate data to particular projects. Yearly totals rise and fall based on construction schedules, so comparison of data for various years has little value because of the differing projects included in each year.

**Bond Expenses** are not considered capital expenses by the FTA. Interest payments are considered a reconciling item for operating expenses. Principal repayments are not reported since the funds from bond issues have already been spent on rolling stock, facilities, and other equipment.

**Rolling Stock** expenses include revenue vehicles and locomotives only. Service vehicles are included in "other." They do not include fare collection or revenue vehicle movement control equipment (radios or cellular phones) or leased tires and tubes. They include replacement, rehabilitation, remanufacture, fleet expansion, major component (engines, transmissions, etc.), and rail overhaul costs.

**Facilities** include construction and rehabilitation of maintenance facilities, crime prevention and security equipment, service and support equipment, operational support (computer hardware and software, bus diagnostic equipment, etc.), transit malls, transfer facilities, intermodal terminals, shelters, passenger stations, depots, terminals, HOV facilities, transit ways, park-and-ride facilities, track, line equipment and structures, signals and communications, and power equipment and substations. Design, engineering, demolition, land acquisition, and relocations costs are included.

**Other** includes service vehicles, construction of general administration facilities, furniture, equipment not an integral part of buildings and structures, data processing equipment, fare collection equipment, and revenue vehicle movement control equipment (radios, cellular phones).

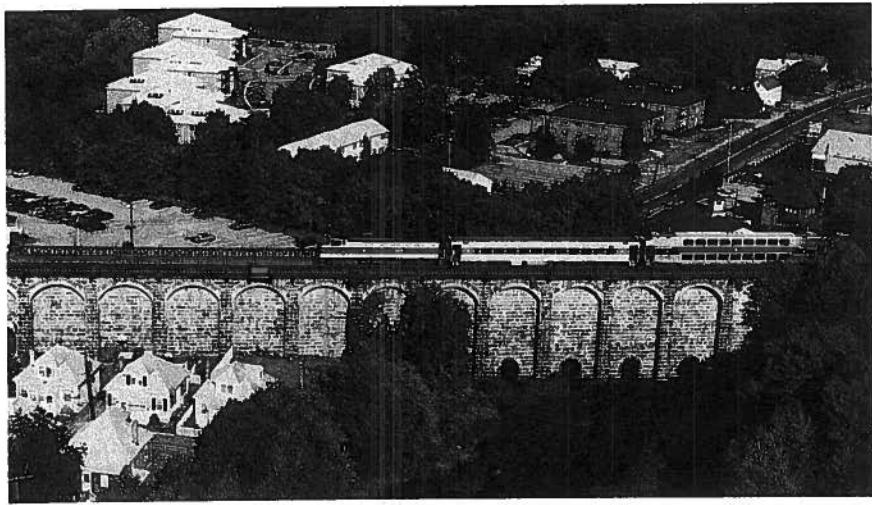

## Construction Costs

File: CONCOST

Although data for public transportation infrastructure construction costs (e.g., new rail lines, high-occupancy-vehicle lanes, and busways) are reported to the Federal Transit Administration National Transit Database, data are not reported by complete project—only by year by mode, which could cover several projects being constructed simultaneously. Also, most projects are constructed over a period of several years, and only broad category data (vehicles, facilities, and other) are reported. Details on mileage, number of stations, size of parking lots, and other variables are not reported. Dozens of variables impact the cost of a project, and some costs, such as the quality of construction and the artistic beauty of a project, cannot be accurately measured. A few of those variables include:

- 1) land acquisition,
- 2) land clearance and demolition,
- 3) relocation of existing businesses and residences,
- 4) availability of "free" or low-cost right-of-way such as abandoned railroads,
- 5) utility relocation,
- 6) number, size, and length of stations,
- 7) number of tracks or lanes,
- 8) length of trackage or roadway,
- 9) number and size of maintenance yards and facilities,
- 10) proportion in deep tunnel, shallow tunnel, on the surface, and elevated,
- 11) number and size of parking lots or garages,
- 12) number and size of bridges,
- 13) station and right of way enhancements such as landscaping, works of art, information kiosks, benches, telephones, concession booths, fountains, etc.,
- 14) type and number of fare vending and collection machines,
- 15) inflation over the several-year time period needed for most projects,
- 16) the going labor costs for and number of construction workers,
- 17) type and number of propulsion, signal, communication, and other operating systems,
- 18) when the project was constructed,
- 19) the number of vehicles required,
- 20) interest and other financing charges.

For these reasons, it is not possible to develop accurate comparative construction cost data on a per-mile or any other basis since the detailed data on the above (and other) variables are not reported to allow identification of comparable projects.

The rehabilitated Canton Viaduct built in the mid-1800s and still in use today by the Massachusetts Bay Transportation Authority commuter rail trains to Boston. A proportion of capital funds are spent to modernize old infrastructure such as this.

Not all projects are large and costly. This attractive small bus transfer center is used by the Corpus Christi Regional Transportation Authority in Texas.

## IMPACTS OF PUBLIC TRANSPORTATION ON THE U.S. ECONOMY

### EMPLOYMENT:

- **CAPITAL INVESTMENT:** 314 jobs created in the year following for each \$10 million investment.
- **OPERATING INVESTMENT:** 570 jobs created for each \$10 million investment in the short run.

### BUSINESS SALES:

- **CAPITAL INVESTMENT:** \$30 million in increased sales per each \$10 million investment.
- **OPERATING INVESTMENT:** \$32 million in increased sales per each \$10 million investment.

**HIGHWAY & PUBLIC TRANSPORTATION USER COSTS:** \$15 million in operating, fuel, and congestion costs per each \$10 million investment.

**BUSINESS OUTPUT:** \$2 million per each \$10 million investment in first year, increasing to \$31 million per each \$10 million in the 20th year.

**PERSONAL INCOME:** \$0.8 million per each \$10 million investment in first year, increasing to \$18 million per each \$10 million in the 20th year.

**STATE & LOCAL GOVERNMENT REVENUE:** 4%-16% increase due to income and employment increases resulting from public transportation investments.

### SECTION V

## Funding, Operating

### *Highlights. . . . .*

- \$22.2 billion was received from all sources in 1999.
- 37.3% came from passengers, 20.4% from local governments, 22.0% from state governments, 3.9% from the federal government, 16.4% is raised by transit agencies from directly-levied taxes, advertising, interest income, and other sources.
- Average adult base cash fare was \$1.09.
- Average fare paid per unlinked trip was \$0.90.
  - for bus it was \$0.74,
  - commuter rail \$3.31
  - demand response \$1.59,
  - ferryboat \$0.91,
  - heavy rail \$0.92,
  - light rail \$0.56,
  - trolleybus \$0.50,
  - vanpool \$2.06,
  - other modes \$0.76.

P = Preliminary

(a) Includes fares retained by contractors; beginning 1991 includes fare subsidies formerly included in "other".

(b) "Local" and "State" combined.

(c) "Local" includes taxes levied directly by transit agency and other subsidies from local government such as bridge and tunnel tolls and non-transit parking lot funds. Beginning 1994, such funds reclassified from "local" to "other".

(d) Beginning 1992, "local" and "other" declined by about \$500 million due to change in accounting procedures at New York City Transit Authority.

(e) Includes "Total Government Funds" plus that portion of "Other Directly Generated Funds" included in "Local Government Funds" beginning in 1994 consisting of transit agency-raised taxes, tolls, and other dedicated funds.

(a) These data are not available from the Federal Transit Administration National Transit Database reports. Estimates made by APTA from transit agency estimates, which are made according to each agency's procedures.

(b) Beginning in 1991 includes fare subsidies formerly classified as "Other" Operating Funding.

## Effects of Fare Increases on Ridership

There is a direct relationship between public transportation fares and ridership. A 1991 APTA study, "Effects of Fare Changes on Bus Ridership," found that on average, a 10 percent increase in bus fares would result in a 4 percent decrease in ridership.

The study also found that bus riders in small cities are more responsive to fare increases than those in large cities are, and peak-hour commuters are much less responsive to fare changes than other passengers.

*Electronic turnstiles such as these at the Port Authority Trans Hudson system in New Jersey are designed to accept electronic passes and tickets pre-purchased at vending machines or from sales agents. Some types also accept tokens and cash.*

*Passes provide unlimited rides during a specified time period, thereby providing reduced fares for frequent riders. This example is from New York's Metropolitan Transportation Authority.*

P = Preliminary

(a) Lowest base fare is \$0.00 (free).

(b) Unweighted average of adult base cash fares; excludes surcharges; each transit agency counted equally.

(c) Per cents represent an approximately 300-transit-agency sample, not estimated for all transit agencies.

**TABLE 20**

File: FAREAVG

**Average Passenger Fare Per Unlinked Passenger Trip by Mode, 1999, Dollars**

MODE	FARE PER UNLINKED PASSENGER TRIP
Bus	0.74
Commuter Rail	3.31
Demand Response	1.59
Ferryboat (b)	0.91
Heavy Rail	0.92
Light Rail	0.56
Trolleybus	0.50
Vanpool	2.06
Other (a)	0.76
<b>TOTAL</b>	<b>0.90</b>

All data are preliminary.

(a) Includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail.

(b) Excludes international, rural, rural interstate, island, and urban park ferries.

## Expenses, Operating

*Highlights. . . . .*

- \$20.5 billion was spent in 1999.
- 45.5% was for vehicle operations, 18.2% for vehicle maintenance, 9.3% for non-vehicle maintenance, 15.5% for general administration, 11.5% for purchased transportation.
- over 80% of all costs were labor-related, 46.3% was for salaries and wages, 24.6% for fringe benefits, 5.9% for services, 11.5% for purchased transportation, about 75% of which was labor-related. 9.2% was for materials and supplies, 3.3% for utilities, 2.2% for casualty and liability costs, -3.0% for all other expenses.
- 57.1% was for buses, 18.0% for heavy rail, 12.6% for commuter rail, 6.9% for demand response, 2.7% for light rail, 2.7% for all other modes.

File: EXMODE

## What Cutting Costs Really Means

File: CUTCOST

Public transportation managers are constantly faced with demands from units of government, voters, the media, and others to operate more efficiently. All too often, the demand is to "cut costs". What does this really mean?

Casualty and liability costs comprise 2.2% of the total, but efforts to reduce risk exposure (fewer miles operated, fewer accidents, and/or fewer employees) and therefore premiums and claims are often overwhelmed by litigation awards, inflation and state- or regionwide premium increases to cover insurer losses elsewhere.

Utility costs cover another 3.3% of the total. A large portion is for propulsion power to operate electric rail cars and trolleybuses. More efficient electric motors and propulsion systems are resulting in lower unit costs, but the total savings are modest. Some non-propulsion costs (heat and air-conditioning) are weather-related and uncontrollable. Others (lights, telephone, water, trash removal) are relatively fixed.

Fuel costs are 2.0% of expenses, but are hard to control due to unstable oil prices and consumption being partly a function of weight (the number of people on the vehicle). Some efficiency improvements in engines have been made, but the only way to really cut fuel costs is to operate fewer miles.

Tires, tubes, and other materials and supplies comprise 7.2% of costs. Buying fewer office supplies, spare parts, and cleaning supplies can be done, but with the result of decreased efficiency, delays in repairs, and postponing costs to the future when they will be more expensive due to inflation. Safety may suffer if too-bare-bones-an-approach results.

The bottom line, then, is that the only way to make substantial cost savings is to cut labor costs, which add up to almost 85% of all costs. They are comprised of salaries and wages (46.3%) and fringe benefits (24.6%), plus an estimated 75% of services (5.9%) and purchased transportation (11.5%) which are labor-related. There are 4 ways to do this: reduce the amount of service operated and therefore the number of employees needed, improve efficiency so that fewer employees are needed, reduce salaries, wages, and fringe benefits, and convert some functions or service operated to services or purchased transportation. Because labor contracts usually prohibit or severely restrict the last two options, it is seldom possible to reduce compensation (except by lowering rates for future employees) or to contract out services or transportation.

The almost unavoidable result is fewer miles and hours operated, which almost inevitably means fewer riders. It is a vicious cycle that has plagued public transportation throughout its history.

## SECTION VII

File: PASS

## Passengers

*Highlights. . . . .*

- 9.2 billion unlinked trips were taken in 1999,  
61.6% were by bus,  
27.5% by heavy rail,  
all other modes totaled only 10.9%.
- 58.7% of bus trips were in urbanized areas of 2,000,000 population or more,  
26.2% in areas between 500,000 and 1,999,999,  
only 15.1% in areas below 500,000 population.
- Average trip length was longest for vanpools at 34.4 miles,  
commuter rail trips averaged 22.1 miles,  
demand response trips 8.1 miles,  
ferryboat trips 5.8 miles,  
heavy rail trips 5.1 miles,  
bus trips 3.8 miles,  
light rail trips 4.1 miles,  
all other modes did not exceed 1.6 miles.
- 52% of trips are taken by women,  
7% by those 65 and older,  
10% by those 18 and under,  
31% by African Americans,  
18% by Hispanics,  
6% by Asian-heritage and Native Americans.  
54% are work-related,  
15% school-related,  
9% shopping-related,  
5.5% medically-related,  
9% socially-related,  
27% are by those with family incomes below \$15,000,  
55% by those with family incomes from \$15,000-\$50,000,  
17% by those with family incomes over \$50,000.  
Only a little over 1% by people with disabilities.

## Number of People Using Public Transportation

File: PEOPLE

*Michigan State University in East Lansing, Michigan and colleges across the country know that public transportation is the smart choice to solving their transportation and parking issues.*

All ridership data reported in this book relate to trips taken--not to people--because that is how data is collected and reported. The heavy use of passes, transfers, joint tickets, and cash by people transferring from one vehicle to another, one mode to another, and from one public transportation agency to another makes it impossible to count people. Only boardings (called unlinked passenger trips) can be counted with any accuracy. At the largest public transportation agencies, even the number of boardings may be estimated for at least a portion of the ridership (e.g., free shuttle vehicles without fareboxes and light rail service using the "proof-of-payment" system).

The majority of people using public transportation take two trips per day (one to work in the morning and one home in late afternoon or evening). A small proportion--perhaps 5%--make only one public transportation trip (e.g., they ride public transportation to the airport and then fly out of town, or they ride public transportation in the morning to work, but ride home with a friend in an automobile at night). A somewhat larger proportion (primarily the public transportation-dependent) take 4, 6, 8, or even 10 trips per day.

At most agencies perhaps 10% to 30% of riders must transfer to a second (and sometimes a third) vehicle to reach their final destination. Some transfer from bus to bus, from bus to train, from one agency's vehicle to another agency's vehicle, etc.; thus, there is a large amount of double-counting of people.

APTA's best estimate, taking these factors into account, is that the number of people using public transportation on any day is about 45% of the number of trips reported. About 14 million people use public transportation on a typical weekday, a 20% increase since 1995. Saturday ridership is normally about one-half weekday ridership, and Sunday ridership is often one-half to two-thirds of Saturday ridership. In many smaller cities, public transportation service does not operate on Sundays; in a lesser number, there is no Saturday service.

## Public Transportation Ridership Trends

File: RIDETRND

Public transportation's popularity has been affected by changing social and economic forces. In the beginning of the 20<sup>th</sup> Century, ridership grew steadily until the Great Depression. Between 1929 and 1939, people took fewer work trips and often could not afford to take leisure trips. Conditions during World War II inspired motor fuel rations along with economic prosperity, positioning public transportation as the dominate mode on the transportation landscape. Ridership peaked in 1946, when Americans took 23.4 billion trips on trains, buses and trolleys.

After World War II, ridership experienced a decline due to inexpensive fuel and government policies favoring low-density suburban development and the sprawl created by the new interstate highway system. By 1960, ridership dropped to 9.3 billion trips and continued to decline until 1972 when transit trips taken totaled 6.5 billion. From 1973 until the mid-1990s, public transportation ridership tallied modest gains based on federal, state and local commitments to improve America's transportation infrastructure.

At the end of the 20<sup>th</sup> Century, public transportation reported record surges in ridership. Public transportation delivered more than 9 billion trips in 1999, representing the highest level of ridership in nearly 40 years. Since 1995, ridership has grown by 20 percent. All major modes of public transportation have reported more riders. Reasons for increased ridership include a strong economy, improved customer service and higher levels of public and private investment in public transportation. Most notably, the landmark Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) and the Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21) funding bills represented milestones for the federal transit program and brought about significant policy changes to favor public transportation.

Most significant is that public transportation ridership rose at a faster rate than automobile use (2 percent) and domestic air travel (3 percent) in 1999.

Recent research provides a description of how people in a community use public transportation services. According to the Transit Cooperative Research Program (TCRP) report *"Enhancing the Visibility and Image of Transit in the United States and Canada,"* 29 percent of those surveyed reported using public transportation at least once in the past month. Regular users, or those who have used public transportation at least once in the past month, accounted for 12 percent of those surveyed.

Many cities have built special transfer centers in their central business districts to make transferring between buses as easy as possible. Many also operate timed-transfer service, in which all routes converge on the center at the same time and depart simultaneously to minimize waiting time. This Regional Transportation Commission center is in Reno, Nevada.

Bicycle racks on buses, trains, and ferries, such as on Omnitrans buses in San Bernardino, California, increase ridership by allowing cyclists to ride public transportation for part of their journeys.

**SECTION VIII**

File: SERVICE

## Service Provided

*Highlights. . . . .*

- 4.0 billion miles and 264.3 million hours of service were operated.
- Buses operated 57.3% of vehicle miles,  
heavy rail 14.5%,  
demand response 18.1%,  
commuter rail 6.7%,  
all other modes 3.4%.
- Buses operated 64.4% of vehicle hours,  
demand response 18.2%,  
heavy rail 11.3%,  
commuter rail 3.2%,  
all other modes 2.9%.
- If all service had been operated by buses, twice as many bus miles would need to have been operated.
- Average revenue service speed was highest for vanpools at 37.7 m.p.h.,  
commuter rail was 33.0 m.p.h.,  
heavy rail 20.5 m.p.h.,  
light rail 15.4 m.p.h.,  
demand response 14.7 m.p.h.,  
bus 12.9 m.p.h.,  
ferryboat 8.0 m.p.h.,  
trolleybus 7.4 m.p.h.,  
all others were 7.4 m.p.h.

(b) Excludes international, rural, rural interstate, island, and urban park ferries.

**SECTION IX****Vehicles**

*Heavy rail, automated guideway, bus, and demand response vehicles at the Miami-Dade Transit Agency in Miami, Florida.*

*Highlights. . . .*

- There were about 129,000 active vehicles providing public transportation service in 1999.
- Buses comprised 57.8%, demand response vehicles 24.8%, heavy rail cars 8.0%, commuter rail cars 3.8%, light rail cars 1.0%, all other modes 4.6%.
- Average age of buses was 7.3 years, demand response vehicles 2.6 years, commuter rail cars 20.2 years, heavy rail cars 21.3 years, light rail cars 17.8 years.

- Average length of buses was 39.2 feet, demand response vehicles 21.5 feet, commuter rail cars 85.0 feet, heavy rail cars 61.6 feet, light rail cars 72.3 feet.
- 7.9% of buses used alternative power, demand response vehicles 8.5%, commuter rail cars 47.4%, heavy and light rail cars and trolleybuses 100%.
- 81.0% of buses were wheelchair accessible, 93.1% of demand response vehicles, 64.0% of commuter rail cars, 98.5% of heavy rail cars, 76.7% of light rail cars.
- Nearly 3,100 buses and about 430 demand response vehicles used compressed natural gas and CNG blends, about 300 used propane, over 800 used liquefied natural gas and LNG blends.
- About 300 to 400 new rail cars are built each year, 6,000 to 7,000 buses and demand response vehicles, over 3,500 of the buses are 40 to 60 feet in length, and over 2,000 are below 27.5 feet.
- The new bus market is dominated by 7 manufacturers, about 32% of new buses may have alternative power sources, about 70% will be 40 feet in length, the average 40-foot bus costs about \$287,000.
- The new rail car market is split among 6 major manufacturers, new rail cars cost from \$1.0 to \$2.5 million apiece, new locomotives exceed \$2.0 million for diesel to about \$4.0 million for electric.

**Rail Vehicles**

File: RAILPIC1

Commuter rail trains are pulled (or pushed) by diesel or electric locomotives or are all-electric without locomotives. This METRA train in Chicago uses double-deck cars, but in older cities of the northeast tunnel and bridge clearances only allow single-deck cars.

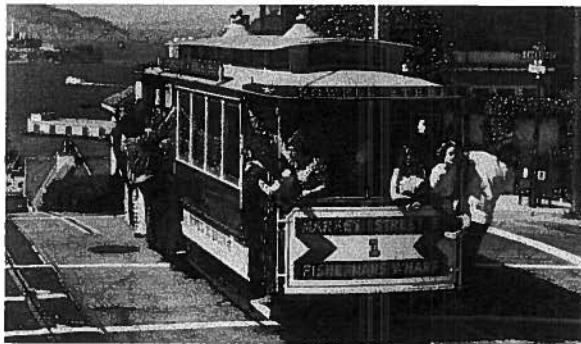

Heavy rail trains such as this MTA New York City Transit train are totally electrified and use totally segregated right-of-way, thus allowing very frequent service carrying very "heavy" numbers of people.

Light rail trains are also electric, but operate partly on non-segregated right-of-way such as city streets--often with single cars--and thus carry "light" loads of people compared to heavy rail. This train is operated by Baltimore, Maryland's Mass Transit Administration.

## More Rail Vehicles

File: RAILPIC2

The only transit system to operate cable cars is California's San Francisco Municipal Railway. These small cars are unpowered and move by clamping onto a moving cable in a trough underneath the street.

A few cities with very steep hills use an inclined plane, where cars are pulled and lowered by a cable operated from an engine house. This is the Monongahela Incline operated by the Port Authority of Allegheny County in Pittsburgh, Pennsylvania.

## Ferryboats

Several coastal and inland cities have found the water to be a perfect right-of-way. This Golden Gate Ferry is in San Francisco.

## Buses

File: BUSPIC

Houston's Metropolitan Transit Authority of Harris County operates this 40-foot-long bus, the most common. Most are high-floor models having two or three steps, but this is a low-floor model without steps.

In the largest cities, some routes require even larger buses. This articulated bus is 60 feet long and bends in the middle; it is operated by the Mass Transit Administration in Baltimore, Maryland.

Demand response service uses vans and minibuses because very few people are on board at one time. Indianapolis Public Transportation Corporation uses this van.

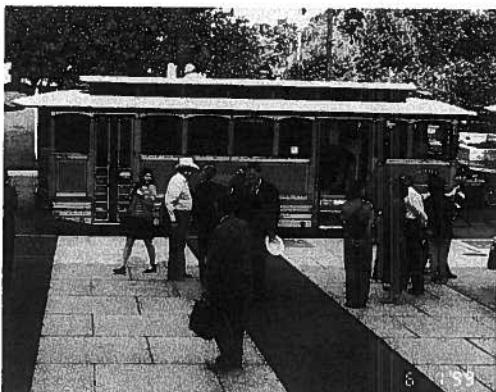

## Trolleys

File: TROLLPIC

Three types of vehicles are commonly called "trolleys."

*This trolleybus is a rubber-tired vehicle without an engine that is powered from two electric wires. Only five cities have them; this Dayton, Ohio version is operated by the Miami Valley Regional Transit Authority.*

*Often called a trolley, this vehicle with a body that imitates an old streetcar is called a "trolley replica bus." Its data are included with bus statistics, since it is rubber-tired and has an on-board power source. This is a Central Oklahoma Transportation and Parking Authority vehicle in Oklahoma City.*

*The original "trolley" was a rail car usually powered by one overhead wire. Often called a "streetcar," it is today called "light rail." This vehicle is at the Santa Clara Valley Transportation Authority in San Jose, California.*

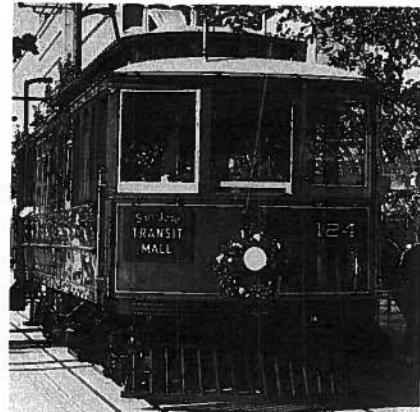

TABLE 49

File: VEHALPOW

### Alternative Power Vehicles by Mode, 2000 (a)

MODE	PER CENT USING ALTERNATIVE POWER
Bus	7.9%
Commuter Rail	47.4%
Commuter Rail Locomotive	42.8%
Demand Response	8.5%
Ferryboat	32.7%
Heavy Rail	100.0%
Jitney	0.0%
Light Rail	100.0%
Other Rail	50.5%
Trolleybus	100.0%
Vanpool	0.4%

(a) Alternative power includes all power except straight diesel and gasoline.

Source: APTA survey. Data reported are not national totals.

*This bus is powered by the most popular alternative power, compressed natural gas. Due to the low-floor configuration, the CNG tanks are located on the roof of the bus. The Pinellas Suncoast Transit Authority that serves the St. Petersburg, Florida area is the operator of this bus.*

P = Preliminary

(a) Buses and demand response only; excludes vanpool vans. Bus comprises about 25% of the 29-seats-or-fewer size group and virtually 100% of the other size groups.

(b) Excludes vanpool vans, ferryboats, and other modes not listed.

(c) Source for rail modes; *Railway Age*, January issue.

## SECTION X

### Employees

Many employees labor behind the scenes, such as this Tri-County Metropolitan Transportation District customer information representative in Portland, Oregon.

#### Highlights . . .

- There were about 338,000 operating employees, plus about 12,000 capital employees, in 1999.
- 49.7% were vehicle operators (including conductors),  
14.0% other vehicle operations employees,  
17.5% vehicle maintenance employees,  
8.5% non-vehicle maintenance employees,  
10.3% general administration employees.
- Bus employees were 60.4%,  
heavy rail 13.7%,  
demand response 15.2%,  
commuter rail 6.8%,  
light rail 1.8%,  
all other modes 2.1%.
- Average compensation per employee (salaries and fringe benefits) was about \$40,200.

P = Preliminary

(a) Based on employee equivalents of 2,080 labor hours equals one employee; beginning 1993 equals actual employees. Series not continuous between 1992 and 1993.

(b) Excludes capital employees and an estimated 10,000-20,000 individuals not employed by transit agencies and whose compensation is classified as "Services"—e.g. boiler repairman, marketing consultant, independent auditor.

P = Preliminary

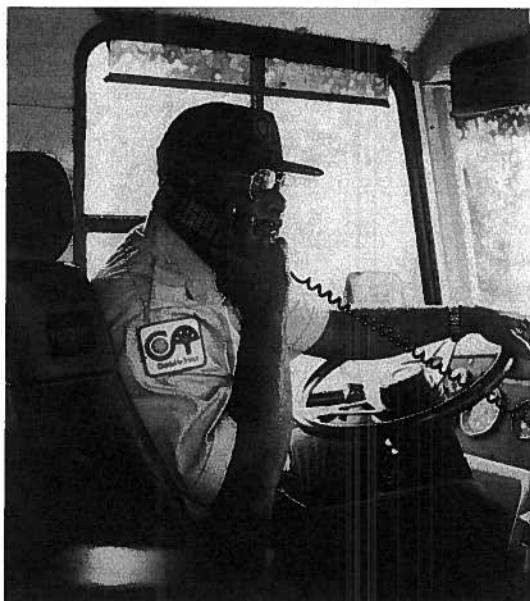

(a) Based on employee equivalents of 2,080 labor hours equals one employee; beginning 1993 equals actual employees. Series not continuous between 1992 and 1993.

(b) Excludes an estimated 10,000-20,000 individuals not employed by transit agencies and whose compensation is classified as "services."

(c) Includes conductors.

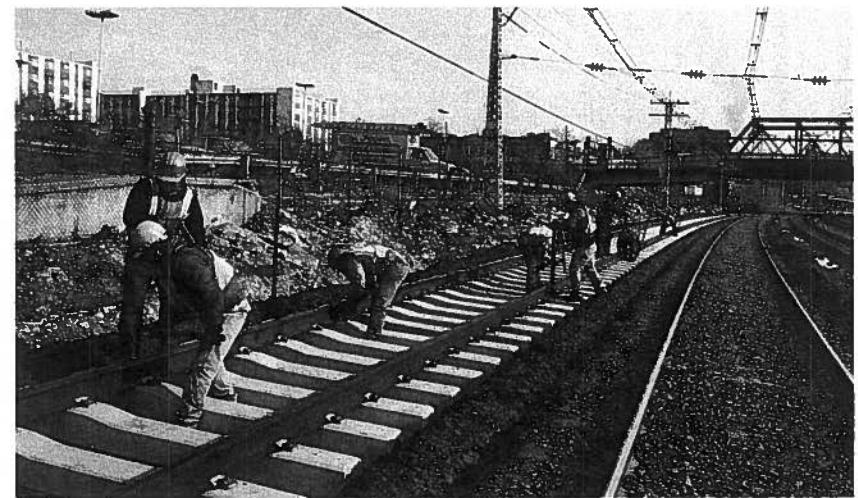

(d) Beginning 1992, ticketing, fare collection, and security employees reclassified from "General Administration" to "Other Vehicle Operations," and vehicle maintenance administrative and support employees reclassified from "Non-Vehicle Maintenance" to "Vehicle Maintenance."

File: EMPJOB

*Bus operators are often the only public transportation employees most riders ever see. The Charlotte Area Transit System in Charlotte, North Carolina employs this operator.*

*Mechanics must undergo extensive training to be able to repair the various types of equipment used by a transit agency. This wheelchair lift mechanic is at the Los Angeles County Metropolitan Transportation Authority.*

*Track workers at the MTA Metro-North Railroad in New York City pursue their never-ending task of making sure the roadbed and track are in good repair.*

*Commuter railroads still employ one of the oldest transportation professions--the conductor. This one is also in New York, but at the MTA Long Island Rail Road--the first to become a public transportation agency.*

## SECTION XI

# Energy and Environment

## Highlights. . . . .

- About 856 million gallons of fossil fuels and 5.2 billion kilowatt-hours of electricity were used to move transit vehicles in 1999.
- 89.1% of all fossil fuels used was diesel, 81.0% of all diesel was used by buses, 9.6% by commuter rail, 5.7% by demand response, 3.7% by ferryboats, less than 0.1% by other modes.
- 35.1% of the non-diesel fuel used was gasoline, 47.7% compressed natural gas, 6.0% propane, 8.3% liquefied natural gas, 2.9% other modes.
- 64.6% of the electric power used was by heavy rail, 25.3% by commuter rail, 8.0 by light rail, 2.1% by other modes.
- Fully loaded buses are 6 times more fuel efficient than single-occupant automobiles, fully loaded rail cars are 15 times more fuel efficient, a commuter using transit saves 200 gallons of gasoline a year.
- Public transportation uses less than 1% of the energy consumed in this country.
- Buses emit only 20% as much carbon monoxide as single-occupant automobiles per passenger mile, only 10% as much hydrocarbons, only 75% as much nitrogen oxides, Rail public transportation emits 25% as much nitrogen oxides and almost no hydrocarbons and carbon monoxides

## Pollution Reduction Resulting From Transit Use

\*Damages lung tissues. Also precursor of ozone which irritates respiratory tract and eyes, decreases the lungs' working ability and causes both cough and chest pain.

\*Limits blood's ability to transport oxygen to body tissue.  
Can cause dizziness, headaches, impaired coordination and death.

\*Precursor of ozone which irritates respiratory tract and eyes, decreases the lungs' working ability and causes both cough and chest pain.

TABLE 69

## New Bus Engine Emission Standards, 1998 Grams per Brake Horsepower-Hour

EMISSION	STANDARD
<b>POLLUTANTS</b>	
Hydrocarbons	1.30
Carbon Monoxide	15.50
Nitrogen Oxides	4.00
Particulate Matter	0.05
<b>SMOKE (a)</b>	
Acceleration Mode	20%
Lug Mode	15%
Peak during either mode	50%

(a) Emissions measured in percent opacity during different operating modes.

Source: Federal Transit Administration, *Sourcebook on Transit-Related Environmental Regulations*, 1994.

## 2004 Model Year Diesel Engine Emission Standards

At the manufacturer's option:

2.4 grams emitted per brake horsepower-hour for all non-methane hydrocarbons plus Nitrogen Oxide, with no limit on non-methane hydrocarbons, OR

2.5 grams if non-methane hydrocarbons are limited to 0.5 grams.

Source: Environmental Protection Agency

## Other Environmental Requirements Affecting Transit

Transit agencies are also or will be subject to environmental regulations on the following:

- Diesel-electric locomotive emissions
- Scrap tires
- Vehicle air-conditioning system refrigerants
- Stormwater runoff from transit facilities
- Hazardous waste management
- Underground storage tanks
- Asbestos and lead-based paint removal
- Hazardous wastes in rights-of-way

**Locomotive Exhaust Emission Standards**

YEAR BUILT	GASEOUS & PARTICULATE EMISSIONS (Grams/Brake Horsepower-hour)				SMOKE STANDARDS (Per cent Opacity—Normalized)

**SECTION XII****Safety and Crime****SAFETY**

Public transportation safety data, collected by the Federal Transit Administration since 1979, include incidents, fatalities, and injuries that do NOT involve criminal activity. However, these data for many transit agencies were incomplete or inaccurate because those systems were not in full compliance with the FTA reporting requirements. In addition, it has been impossible to separate out patron-only data for the various types of safety incidents because data reported combined patrons, employees, and other persons (e.g., automobile and other vehicle occupants, pedestrians, bicyclists). Only total patron fatalities data (which are zero 98% of the time) have been reasonably reliable.

In 1995, the FTA improved its efforts to ensure compliance and revised its reporting form to report patron, employee, and other data separately for each type of incident. By 1996 most of the reporting problems had been eliminated.

Great caution must be exercised in attempting to compare public transportation safety data to airlines, automobiles, intercity buses, intercity trains, school buses, and other modes of transportation. Public transportation's operating environment is unique compared to these other modes due to the unique nature of public transportation vehicles, stations, and methods of operation and the huge numbers of people involved. Among the unique factors are:

- No other mode of transportation operates in an environment so fraught with the potential for injury--twice a day for three or four hours a continuing flow of thousands of people bump into and jostle one another in the constricted spaces of public transportation vehicles and on the platforms, ramps, stairways, escalators, and elevators of public transportation stations and transfer centers.
- Most public transportation buses and vans have built-in lifts or ramps to accommodate those using wheelchairs, walkers, and other mobility aids, while most rail, bus, and ferry stations have

stairways, escalators, or elevators. All these have a significant risk factor resulting in a disproportionate number of safety incidents. No other mode of travel depends on such equipment to any significant extent.

- Minor incidents with less than \$1,000 in transit agency property damage are not counted as safety incidents unless a fatality, injury, or fire occurs. Such incidents (e.g., a 2-mile-an-hour collision with a post or another vehicle resulting in a dented bumper or broken taillight) are so common that they are considered "wear-and-tear" incidents that have no safety implications.
- A fatality is defined as a death confirmed within 30 days of an incident. Lingering injuries resulting in death months later are counted as injuries due to the impracticality of attempting to keep track of such injuries over long periods of time.
- All fires are counted even if they involve something as minor as a cigarette burning in a trash can.
- Heavy and commuter rail stations act as magnets for those contemplating suicide, with about one-third of all deaths reported to the FTA for these two modes being suicides. In addition, there are numerous injuries to persons failing in suicide attempts as well as to public transportation vehicle occupants (due to sudden braking) and to others in the wrong place at the wrong time. These casualties inflate the public transportation total, but are obviously beyond the transit agency's control.
- Unlike other transportation modes, the vast majority (over 80%) of safety incidents occur in urbanized areas with over 1,000,000 population.

## CRIME

1995 was the first year crime (technically called security) data relating to incidents, fatalities, and injuries resulting from criminal or illegal activities were collected by the Federal Transit Administration. On the assumption that almost no crime exists in small communities, only data for transit agencies in or serving urbanized areas over 200,000 population are collected. Data are derived from the FBI Uniform Crime Reporting Program.

The data for 1995 were quite incomplete since many transit agencies had not complied with the prescribed definitions and procedures. Some larger transit agencies still have not solved these problems. Even when they do, there will be several inherent problems with the data that will make much of it non-comparable:

- Some acts (such as drunkenness and loitering) are crimes in some states, counties, and cities, but not in others.
- Arrests may be handled by police forces in any of the dozens or hundreds of cities, towns, villages, and counties that the agency serves. A few of the largest agencies also have their own police forces. Accurate totals will require accumulation of data from each of these police forces, most of which probably cannot readily separate public transportation crimes from all other crimes in their jurisdiction. Failure of even one jurisdiction with numerous crime incidents to provide data will make the agency's data grossly inaccurate.
- Minor offenses such as trespassing and drunkenness are only counted if an arrest is made. When a citation or warning is issued, it is as if the incident never occurred. There will probably be considerable variances among police forces regarding the proportion of arrests vs. citations.
- Some crimes such as homicides have a high enforcement priority. Crimes low on the priority list such as drunkenness tend to be under-reported since scarce police resources have to be allocated to the most serious crimes, and the public, understanding that, does not report many less-serious crimes.

TABLE 71

122

Source: Federal Transit Administration, National Transit Database. Data reported include about 450 of the largest transit agencies.

- (a) Data may significantly underestimate total since data for systems not reported by the FTA comprises a significant portion of these modes.
- (b) Includes derailments/vehicles going off road, and non-collision inside-vehicle, boarding/alighting, and in-vehicle fires.
- (c) Includes non-collision parking facility, right-of-way, station/bus stop, and in-station and right-of-way fires.
- (d) Excludes arson fires. Many fires are double-counted in the other three categories.
- (e) Includes collision, derailments/vehicles going off road, and non-collision inside-vehicle, boarding/alighting, and in-vehicle fires.

Source: Federal Transit Administration, National Transit Database. Data reported include about 450 of the largest transit agencies.

- (a) Data may significantly underestimate total since purchased service not reported by the FTA comprises a significant portion of these modes.

Transit systems routinely train for disasters and other unpreventable incidents. Drills such as this Washington Metropolitan Area Transit Authority evacuation of a train on a bridge over the Potomac River involve WMATA employees, fire and rescue personnel from both Washington, DC and Arlington, Virginia, and local power company employees.

(a) Data may significantly understate total since data for systems not reported and data for urbanized areas under 200,000 population not reported by the FTA comprises a significant portion of these modes.

(b) Data include patrons and non-patrons. Patron-only data not collected.

(c) Includes forcible rape, robbery, aggravated assault.

(d) Includes larceny/theft and motor vehicle theft.

(e) Only includes incidents where arrests were made; when a citation is issued, the incident is not reported.

Most large transit systems have their own police forces, or contract with private security firms. Most smaller systems depend on local police and sheriff's departments for security. This officer is at the Miami-Dade Transit Agency in Miami, Florida.

Modern rail station design minimizes crime by eliminating columns, dark corners, and other areas where criminals can lurk. This Washington Metropolitan Area Transit Authority heavy rail station illustrates such design.

**SECTION XIII**

File: MODESUM

**Mode Summaries**

*Lymmo, a special circulator bus service on reserved lanes in the central business district of Orlando, Florida, is operated by LYNX, the Central Florida Regional Transportation Authority.*

This section contains data presented elsewhere in this book arranged by mode. Also included are modal information on average fare per unlinked trip, operating expense object classes and functions, average weekday unlinked passenger trips, vehicles, employees, and energy consumption.

Lists of the 35 largest bus agencies, ferryboat agencies, and trolleybus agencies are provided, as are lists of commuter rail, heavy rail, light rail, and other rail agencies with the number of stations of each.

"Other Rail" includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail.

File: TRVSAUTO

**Public Transportation  
vs. Automobile Costs**

Numerous people use public transportation to save money, including social and recreational riders such as this family boarding the San Diego Trolley in California.

**Highlights. . . . .**

- Typical cost to a user to ride public transportation for a year ranges from \$189 to \$2,077, depending on base fare, surcharges, and discounts available.
- Typical single-occupant personal vehicle driving costs range from \$4,826 per year for a small car to \$9,685 per year for a large car, depending on mileage.
- \$2 to \$3 billion per year is paid by society for highways and motor vehicle use, but only 53% to 68% of that amount is paid by users.

TABLE 95

**Examples of Cost of Riding Public Transportation**

COST	\$0.50 BASE FARE	\$0.75 BASE FARE	\$1.00 BASE FARE	\$1.25 BASE FARE	\$1.50 BASE FARE

**SECTION XV****Federal Legislation****History and Provisions of the Federal Transit Act And Other Major Laws Affecting Public Transportation**

File: FTA

In 1964 the United States Congress found that "the welfare and vitality of urban areas, the satisfactory movement of people and goods within such areas, and the effectiveness of housing, urban renewal, highway, and other federally aided programs were being jeopardized by the deterioration or inadequate provision of urban transportation facilities and services. . . ." In response, Congress enacted the Urban Mass Transportation Act of 1964, which provided federal aid to transit agencies for capital equipment purchases.

Continuing this commitment into its fourth decade, Congress enacted the Transportation Equity Act for the 21<sup>st</sup> Century (TEA 21). TEA 21 authorizes higher levels of funding for public transportation than any previous law, with the major portion of funding guaranteed to be included in budget amounts available for annual appropriations. It also continues and improves provisions of prior authorizing laws that are important to the continuing Federal commitment to improve public transportation service throughout America.

Landmarks in the evolution of the federal public transportation assistance program over the years include:

1961: The Housing and Urban Development Act of 1961 provided public transportation demonstration funding and mass transportation project loans.

1964: The Urban Mass Transportation Act of 1964 established the Urban Mass Transportation Administration (UMTA) within the Department of Housing and Urban Development to provide capital grants to transit agencies.

1966: The Urban Mass Transportation Act of 1966 expanded capital funding and allowed funding for research, planning, and training. UMTA

was moved to the newly created Department of Transportation (DOT).

1970: The Urban Mass Transportation Assistance Act of 1970 authorized a \$3.1 billion program of capital grants.

1973: The Federal-Aid Highway Act of 1973 increased the federally funded portion of public transportation capital projects from 66 2/3% to 80% and authorized the use of Federal-Aid Urban Systems highway funds and Interstate Highway Transfers for qualifying public transportation projects.

1974: The National Mass Transportation Assistance Act of 1974 increased authorizations for discretionary capital funding and created a formula grant program to allocate funding directly to urbanized areas that could be used for either operations or capital projects.

1978: The Federal Public Transportation Act of 1978, Title III of the Surface Transportation Assistance Act of 1978 divided the formula grant program into categorical programs that included capital grants for bus purchases and additional operating grants for fixed guideway systems and places outside of urbanized areas.

1982: The Federal Public Transportation Act of 1982, Title III of the Surface Transportation Assistance Act of 1982 provided that 1 cent of a 5 cents per gallon increase in the Highway Trust Fund tax on motor fuels would be placed into a Mass Transit Account for capital projects, increased the portion of all funding allocated through the formula grant program, and altered the formula grant program allocation formula to include public transportation service data as well as population data.

1984: The Tax Reform Act of 1984 allowed employees to receive a *de minimis*, up to \$15 per month, tax-free fringe benefit in the form of an employer-provided public transportation subsidy or pass.

1987: The Federal Mass Transportation Act of 1987, Title III of the Surface Transportation and Uniform Relocation Assistance Act of 1987 provided that a portion of the Highway Trust Fund Mass Transit Account would be allocated by formula for capital purposes.

1990: The Omnibus Budget Reconciliation Act of 1990 raised to 1.5 cents per gallon the portion of the Highway Trust Fund tax on motor fuels to be placed in the Mass Transit Account.

1990: The Americans with Disabilities Act of 1990 (ADA) required transit agencies to provide service accessible to persons with disabilities.

1990: The Clean Air Act Amendments of 1990 recast transportation planning to provide for improved air quality.

1991: The Federal Transit Act Amendments of 1991, Title III of the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) extended public transportation assistance through FY 1997, increased the amounts authorized, re-named the transit law the Federal Transit Act and the Urban Mass Transportation Administration the Federal Transit Administration, and converted the rail modernization portion of Section 5309 major capital funds to a formula basis.

Surface Transportation, Title I of ISTEA provided that specific funds authorized through Federal-Aid Highways programs may be used for either public transportation or highway projects. These flexible funds are to be used for the mode of transportation best suited to meeting the needs of individual areas and states.

1991: The Omnibus Transportation Employee Testing Act of 1991 mandated the establishment of anti-drug and alcohol misuse programs for safety-sensitive employees of recipients and contractors to recipients of Major Capital Investment, Urbanized Area Formula, and Rural Area Formula public transportation funds.

1992: The Energy Policy Act of 1992 increased the tax-free amount of the public transportation commuter fringe benefit to \$60 per month with an inflation provision, removed the cliff provision which had made the entire benefit taxable if the monthly limit was exceeded, and extended the benefit to vanpools.

1993: The Omnibus Budget Reconciliation Act of 1993 raised to 2 cents per gallon the portion of the Highway Trust Fund tax on motor fuels to be placed in the Mass Transit Account, effective October 1, 1995.

1994: The Federal Transit Act was codified as Title 49, Chapter 53—Mass Transportation, of the United States Code.

1997: The Taxpayer Relief Act of 1997 raised to 2.86 cents per gallon the portion of the Highway Trust Fund tax on motor fuels to be placed in the Mass Transit Account, effective October 1, 1997.

1997: Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) was extended through March 31, 1998.

1998: The Federal Transit Act of 1998, Title III of the Transportation Equity Act for the 21st Century (TEA 21) extends the public transportation program through FY 2003. TEA 21 increases public transportation funding authorizations, up to 70 percent above ISTE A appropriation levels if all authorized amounts are appropriated. A total of \$41 billion is authorized for the six-year period, of which \$36 billion is guaranteed. Guaranteed amounts are protected in the budget process and can only be appropriated for public transportation uses. The guaranteed amounts, however, are subject to annual appropriation by the Congress.

TEA 21 retains and improves many provisions of ISTE A including the transportation planning process and flexible funding. The distribution of formula funds among sections 5307, 5310, and 5311 is revised. The definition of eligible uses of Urbanized Area Formula capital funds is expanded to include preventive maintenance and ADA related expenditures for all urbanized areas and to include operating expenditures for urbanized areas under 200,000 population. The Rail Modernization program formula is adjusted to increase the proportion of new funds for newer fixed-guideway systems. The public transportation commuter benefit is expanded to include employee purchase of public transportation passes with pre-tax dollars.

Two new programs are created. The Clean Fuels Formula Grant program provides funds for adoption of clean fuel technologies including purchase or lease of clean fuel buses and facilities. The Job Access and Reverse Commute program funds projects that improve job access for current and former welfare recipients and other eligible low-income individuals.

#### Funding Provisions of the Federal Transit Act

Funds for federal public transportation assistance come from two sources. Money from general governmental revenues is appropriated each year by Congress. As part of that process Congress sets a limit on the amount of money from the Highway Trust Fund Mass Transit Account that can be used to fund public transportation projects during the next year.

Transit agencies receive funds from several Federal Transit Act programs, which allocate funding to urbanized areas or states by formula or for specific projects through discretionary processes. The largest are:

**Capital Investment, 49 USC 5309:** Original grant program, begun in FY 1964, provides capital assistance to eligible public transportation projects in three categories: (1) construction of new fixed-guideway systems or extensions of existing systems called "New Starts," (2) modernization of existing fixed-guideway systems called "Rail Modernization," and (3) major bus related construction projects or equipment acquisition called "Bus Capital."

*Status:* Authorized through FY 2003.

*Recipients of Funds:* State or local public bodies and agencies.

*Eligible Expenditures:* Capital projects only.

*Method of Allocation:* Rail Modernization funds are distributed to urbanized areas with fixed-guideway systems in operation for at least seven years on a formula basis. New Start and Bus Capital funds are distributed to specific projects at the discretion of the Congress or the Federal Transit Administration if the Congress does not specify a distribution. Eligible New Start projects for FY 1998 through FY 2003 and some Bus Capital project amounts for FY 1999 and FY 2000 are authorized in TEA 21. Amounts for individual projects are specified in annual appropriations laws. Authorizing legislation designates 40% of the funds for New Starts, 40% for Rail Modernization, and 20% for Bus Capital.

*Matching Ratio:* 80% federal, 20% state and local.

**Urbanized Area Formula (UAF), 49 USC 5307 and 5336:** Apportions operating and capital assistance on a formula basis to urbanized areas.

*Status:* Authorized through FY 2003.

*Recipients of Funds:* Directly to urbanized areas of at least 200,000 population, through state governors to urbanized areas under 200,000 population.

*Eligible Expenditures:* For urbanized area of at least 200,000 population, capital expenditures by local decision. Eligible capital expenditures include acquisition of public transportation vehicles, construction of facilities including fixed-guideway rights-of-way, purchase of equipment, rehabilitation of buses, overhaul of rail vehicles, preventive maintenance, up to 10 percent of the apportioned amount for non-fixed-route ADA

paratransit service, and other uses. For urbanized areas under 200,000 population, capital expenditures as for larger urbanized areas and operating expenditures.

**Method of Allocation:** By six formulas based on urbanized area population and mode of public transportation service. Amount is 91.23% of total UAF, RAF, and Elderly and Disabled funds beginning in FY 1999. These formulas are:

(1) Fixed guideway operations in urbanized areas of at least 200,000 population, basic formula, 28.87% of the UAF. The formula is 60% fixed guideway revenue vehicle miles operated and 40% fixed guideway route miles. Urbanized areas of at least 750,000 population that have commuter rail operations receive a minimum of 0.75% of this formula.

(2) Fixed guideway operations in urbanized areas of at least 200,000 population, incentive formula, 1.32% of the UAF. The formula is the number of fixed guideway passenger miles traveled multiplied by the number of fixed guideway passenger miles traveled per dollar of operating cost. Urbanized areas of at least 750,000 population that have commuter rail operations receive a minimum of 0.75% of this formula.

(3) Bus operations in urbanized areas of at least 1,000,000 population, basic formula, 40.31% of the UAF. The formula is 50% bus revenue vehicle miles operated, 25% urbanized area population, and 25% urbanized area population density weighted by population.

(4) Bus operations in urbanized areas from 200,000 to 999,999 population, basic formula, 14.61% of the UAF. The formula is 50% bus revenue vehicle miles operated, 25% urbanized area population, and 25% urbanized area population density weighted by population.

(5) Bus operations in urbanized areas of at least 200,000 population, incentive formula, 5.57% of the UAF. The formula is the number of bus passenger miles traveled multiplied by the number of bus passenger miles traveled per dollar of operating cost.

(6) Mass transportation operations in urbanized areas under 200,000 population, 9.32% of the UAF. The formula is 50% urbanized area population and 50% urbanized area population density weighted by population.

**Matching Ratios:** Operating assistance: 50% federal, 50% state and local. Capital assistance: 80% federal, 20% state and local.

**Elderly and Disabled Persons, 49 USC 5310:** Established by the UMT Act of 1970 to assure mass transportation availability to elderly and disabled persons.

**Status:** Authorized through FY 2003.

**Recipients of Funds:** Private, non-profit corporations and associations providing mass transportation services for the elderly and disabled or public bodies coordinating such service or providing service where no non-profit service is available, through state governors.

**Eligible Expenditures:** For capital equipment and cost of leased or contracted service.

**Method of Allocation:** Allocated by formula to states based on elderly and disabled population. Amount is 2.4% of total UAF, RAF, and Elderly and Disabled funds beginning in FY1999.

**Matching Ratio:** 80% federal, 20% state and local.

**Rural Area Formula (RAF), 49 USC 5311:** Established by the STA Act of 1978 to apportion funds for mass transportation in rural areas outside of urbanized areas.

**Status:** Authorized through FY 2003.

**Recipients of Funds:** Mass transportation providers outside of urbanized areas through state governors.

**Eligible Expenditures:** Operations or capital projects.

**Method of Allocation:** Formula based on non-urbanized area population of each state. Amount is 6.37% of total UAF, RAF, and Elderly and Disabled funds beginning in FY 1999.

**Matching Ratio:** Operating assistance: 50% federal, 50% state and local. Capital assistance: 80% federal, 20% state and local.

**Rural Transit Assistance Program, 49 USC 5311(b)(2):** Established by the FMT Act of 1987 to provide research, technical assistance, and training grants and related support services to non-urbanized areas. Allocated separately from funds in remainder of section 5311.

**Clean Fuels Formula Program, 49 USC 5308:** Established by TEA 21 to expedite the adoption of clean fuels bus technologies.

**Status:** Authorized through FY 2003.

**Recipients of Funds:** Designated recipients in urbanized areas that make application for funds by January 1 of each fiscal year.

**Eligible Expenditures:** To purchase or lease clean fuel vehicles and related facilities, to improve existing facilities for clean fuel buses, and to re-power, retrofit, or rebuild pre-1993 engines under certain conditions. Eligible clean fuels include compressed natural gas, liquefied natural gas, biodiesel fuels, batteries, alcohol-based fuels, hybrid electric, fuel cell, clean diesel, and other low or zero emissions technology.

**Method of Allocation:** Funds are apportioned to grant applicants in air-quality non-attainment and maintenance areas under a formula that weighs bus fleet size and bus passenger miles by severity of non-attainment. Two thirds of funds must go to urban areas with at least 1,000,000 population and one third to urban areas under 1,000,000 population.

**Matching Ratio:** 80% federal, 20% state and local.

**Job Access and Reverse Commute Program, Section 3037 of TEA 21:** Established by TEA 21 to improve job access for current and former welfare recipients and eligible low-income individuals.

**Status:** Authorized through FY 2003.

**Recipients of Funds:** Local governmental authorities and agencies or nonprofit organizations selected by Metropolitan Planning Organizations in urbanized areas of at least 200,000 population and selected by the chief executive officer of the state for urbanized areas under 200,000 population.

**Eligible Expenditures:** Capital and operating costs of equipment, facilities, and associated capital maintenance items related to providing access to jobs, promoting public transportation use by workers with non-traditional work schedules, promoting the use of vouchers by appropriate agencies, the purchase or lease of vehicles for shuttle service at suburban locations, costs associated with adding reverse commute service or to otherwise

facilitate transportation to suburban job opportunities, and promoting the use of employer provided transportation and public transportation pass benefits. Planning and coordination activities are not eligible.

**Method of Allocation:** Awarded to eligible applicants on a competitive basis with consideration given to several factors including percentage of the population that are welfare recipients, need for additional services, coordination and use of existing services, proposal of innovative approaches, and other factors.

**Matching Ratio:** 50% federal, 50% state and local. Federal funds from agencies outside of the Department of Transportation that are eligible for use for transportation expenditures can be used for the state and local match.

#### **Provisions of Other Major Federal Laws Affecting Public Transportation**

**Americans with Disabilities Act of 1990,** prohibits discrimination based on disabilities in the areas of employment, public services, public accommodations and services operated by private entities, public transportation, and telecommunications.

Employers are prohibited from discriminating against any qualified individual with a disability in regard to job application procedures, the hiring, advancement or discharge of employees, employee compensation, job training, and other terms, conditions, or privileges of employment. All private company, state and local government, employment agency, and labor union employers with 15 or more employees had to comply by July 26, 1994.

All programs, activities and services provided or made available by state and local government, including public transportation, are prohibited from discriminating on the basis of disability, regardless of whether or not those entities receive federal financial assistance.

All new public transportation buses and rail cars must be accessible to the mobility, hearing, and sight-impaired. At least one car on every train must be accessible. All new passenger stations must be accessible, and older "key" stations must be retrofitted for accessibility, unless an extension was granted for extraordinarily expensive retrofitting. These provisions and those requiring complementary paratransit service for those unable to use fixed-route service were effective January 26, 1997.

**Clean Air Act Amendments of 1990**, recast transportation planning to ensure that, in areas experiencing air quality problems, planning is geared to improved air quality as well as mobility. State and local officials are required to find ways to reduce emissions from vehicles (including public transportation buses), to develop projects and programs that will alter driving patterns to reduce the number of single-occupant vehicles, and to make alternatives such as public transportation a more important part of the transportation network. The Act focuses on the issue of "conformity", which is a determination made by the metropolitan planning organization and the U.S. Department of Transportation that transportation plans and programs in non-attainment areas meet the requirement of reducing pollutant emissions.

The Environmental Protection Agency imposed emissions standards as a result of the Act that require public transportation bus engines to meet increasingly strict emission standards, culminating in the following in 1998: nitrogen oxides--4.0 grams/brake horsepower-hour (a 33% reduction from the 1990 pre-law standard), and particulate matter (soot)--.05 g/bhh (a 92% reduction).

No reductions in the 1990 carbon monoxide and hydrocarbon emissions levels of 15.5 g/bhh and 1.3 g/bhh were mandated, since they are not feasible due to technological limitations.

**Omnibus Transportation Employee Testing Act of 1991**, mandates regulations requiring recipients of financial assistance under the Capital Investment, Urbanized Area Formula, and Rural Area Formula sections of the Federal Transit Act and Section 103(e)4 of Title 23 of the United States Code to establish multifaceted anti-drug and alcohol-misuse programs for their own as well as contracted safety-sensitive employees. All transit agencies were required to implement such programs by January 1, 1996.

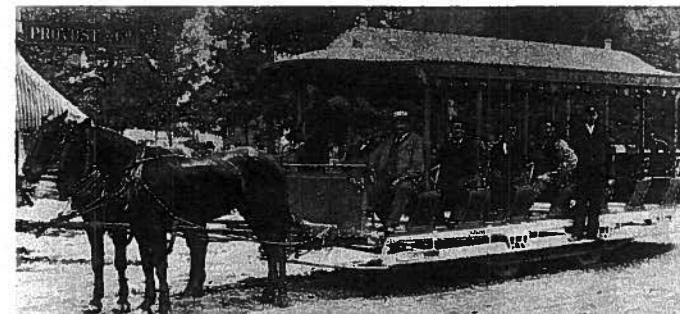

Safety-sensitive positions include revenue vehicle operators, dispatchers, maintenance staff, non-revenue vehicle operators if a Commercial Driver's License is required, police and security personnel carrying a firearm, and supervisors when performing safety-sensitive functions.

Commuter rail employees are exempt, since they are covered by Federal Railroad Administration regulations. Ferryboat employees are covered, but are also subject to Coast Guard regulations.

## SECTION XVI

### History

*This 1887 Montreal, Canada horsecar typified public transportation prior to electrically-powered streetcars.*

Public transportation, except for ferryboats, was not a part of life until the 19th century, since home, work, and recreation were almost always within walking distance of each other.

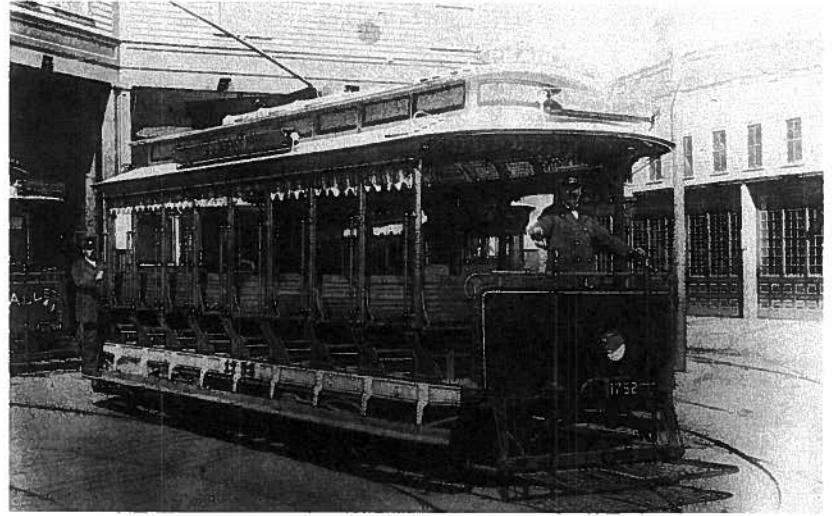

Today's public transportation evolved from three European developments in the late 18th and early 19th centuries: distances between housing and work in larger cities increased so that walking was no longer feasible for many people, horse-pulled stagecoaches were introduced to meet this need for the few who could afford it, and the railroad was invented. The horsecar--initially a horse-pulled stagecoach body on special wheels that ran on rails--was devised to operate on the unpaved or poorly paved streets of that era.

As technology developed, elevated steam railroads, cable-pulled cars, electric streetcars, and underground electric trains all became common, and many of these developments were pioneered in the U.S. All operated on rails, and it wasn't until the 1910-1920 period that improved street pavement and internal combustion engines led to the widespread introduction of buses. Only the largest cities today need the high-capacity rail vehicles developed in the 1800s.

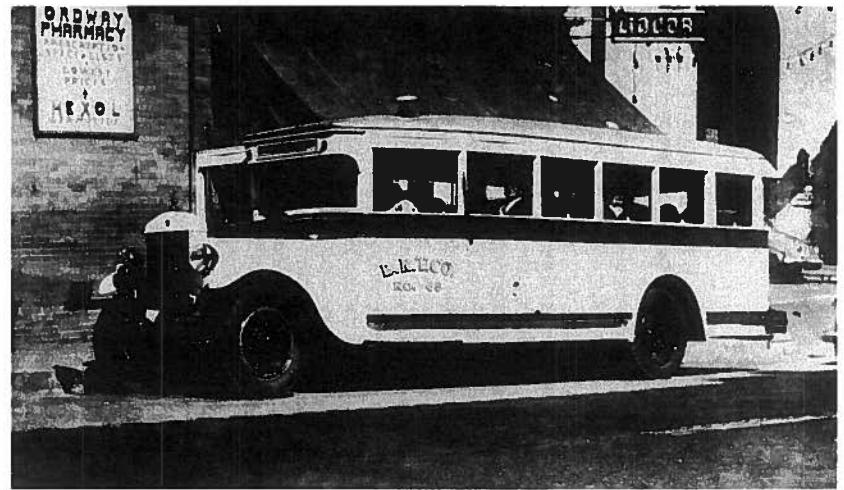

The following pages highlight the most important milestones in U.S. public transportation history. It should be noted that some of these developments were preceded by similar developments in Europe and thus are not world "firsts."

**TABLE 98**  
**Milestones in U.S. Public Transportation History**

1630	Boston—reputed first publicly operated ferryboat
1740	New York—reputed first use of ox carts for carrying of passengers
1811	New York—first mechanically operated (steam-powered) ferryboat
1827	New York—first horse-drawn urban stagecoach (omnibus) line (Dry Dock & East Broadway)
1827	Baltimore—first railroad (Baltimore & Ohio Railroad Co.)
1830	New York—first horse-drawn street railway line (New York & Harlem Railroad Co.)
1832	New Orleans—oldest street railway line still operating (New Orleans & Carrollton line)
1835	Boston—first commuter fares on a railroad (Boston & Worcester Railroad)
1850	New York—first use of exterior advertising on street railways
1856	Boston—first fare-free promotion
1861	New York—first failed attempt to form street railway labor organization
1868	New York—first cable-powered (& first elevated) line (West Side & Yonkers Patent Railway)
1870	New York—first pneumatic-powered (& first underground) line (Beach Pneumatic Railroad Co.)
1870	Pittsburgh—first inclined plane
1871	New York—first steam-powered elevated line (New York Elevated Railroad Co.)
1872	Great Epizootic horse influenza epidemic in eastern states kills thousands of horses (the motive power for most street railways)
1873	San Francisco—first successful cable-powered line (Clay St. Hill Railroad)
1874	San Francisco, CA—first recorded strike by street railway workers
1882	Boston-American Street Railway Association (APTA's original predecessor) formed
1883	New York—first publicly operated cable-powered line (Brooklyn Bridge)
1883	New York—first surviving street railway labor organization (Knights of Labor Local 2878)

The first U.S. rail car for underground use was put into service on a light rail line in Boston in 1897 by a predecessor of today's Massachusetts Bay Transportation Authority. That line is still in service today.

Early buses, such as this bus operated in Monterey, California in 1939, were usually boxy passenger compartments on a truck body. It wasn't until the 1930s that the engine-in-rear, flat-front design seen today became common.

TABLE 98 (continued)

**Milestones in U.S. Public Transportation History**

1884	Cleveland—first electric street railway line (East Cleveland Street Railway)
1884	first public transportation-only publication ( <i>The Street Railway Journal</i> )
1886	Montgomery, AL—first semi-successful citywide street railway transit agency (Capital City Street Railway Co.)
1888	Richmond, VA—first successful electric street railway
1889	New York—first major strike by street railway workers
1892	Indianapolis—first national street railway labor union founded (Amalgamated Association of Street Railway Employees of America, now called the Amalgamated Transit Union)
1893	Portland, OR—first interurban rail line (East Side Railway Co.)
1894	Boston—first public transportation commission (Boston Transit Commission)
1895	Chicago—first electric elevated rail line (Metropolitan West Side Elevated Railway)
1897	Boston—first electric underground street railway line (West End Street Railway/Boston Elevated Railway Co.)
1897	Boston—first publicly-financed public transportation facility (street railway tunnel)
1898	Chicago—first electric multiple-unit controlled rail line (Chicago & South Side Rapid Transit Railroad Co.)
1904	Bismarck, ND—first state-operated street railway (State of North Dakota Capital Car Line)
1904	New York—first electric underground (& first 4-track express) heavy rail line (Interborough Rapid Transit Co.)
1905	New York—first public takeover of a private public transportation company (Staten Island Ferry)
1905	New York—first bus line (Fifth Avenue Coach Co.)
1906	Monroe, LA—first municipal street railway
1908	New York—first interstate underground heavy rail line (Hudson & Manhattan Railroad to New Jersey)
1910	Hollywood, CA—first trolleybus line (Laurel Canyon Utilities Co.)
1912	San Francisco—first publicly operated street railway in a large city (San Francisco Municipal Railway)

TABLE 98 (continued)

**Milestones in U.S. Public Transportation History**

1912	Cleveland—first street railway to operate buses (Cleveland Railway)
1914	Los Angeles—first jitney
1916	Saint Louis—first public bus-only transit agency (St. Louis Division of Parks and Recreation Municipal Auto Bus Service)
1917	New York—last horse-drawn street railway line closed
1918	New York—APTA's predecessor organization first calls for public takeover of public transportation
1920	first bus not based on truck chassis (Fageol Safety Coach)
1921	New York—first successful trolleybus line
1923	Bay City, MI, Everett, WA, Newburgh, NY—first cities to replace all streetcars with buses
1926	highest peacetime public transportation ridership before World War II (17.2 billion)
1927	Detroit—first bus without cowls-type engine
1927	Philadelphia—first automobile park and ride lot and first bus-rail transfer facility for a non-commuter rail line
1932	New York—first publicly operated heavy rail line (Independent Subway)
1933	San Antonio—first large city to replace all streetcars with buses
1934	New York—Transport Workers Union of America founded
1935	Washington—Public Utility Holding Company Act of 1935 enacted requiring most power companies to divest themselves of public transportation operations and eliminating much private public transportation financing
1936	bus manufacturers began to assume control of or influence street railways, leading to rapid replacement of streetcars with buses
1936	New York—first industry-developed standardized street railway car (P.C.C. car) (Brooklyn & Queens Transit System)
1936	Washington—first large-scale federal government public transportation assistance (Public Works Administration)
1938	Chicago—first use of federal capital funding to build a public transportation rail line
1939	Chicago—first street with designated bus lane

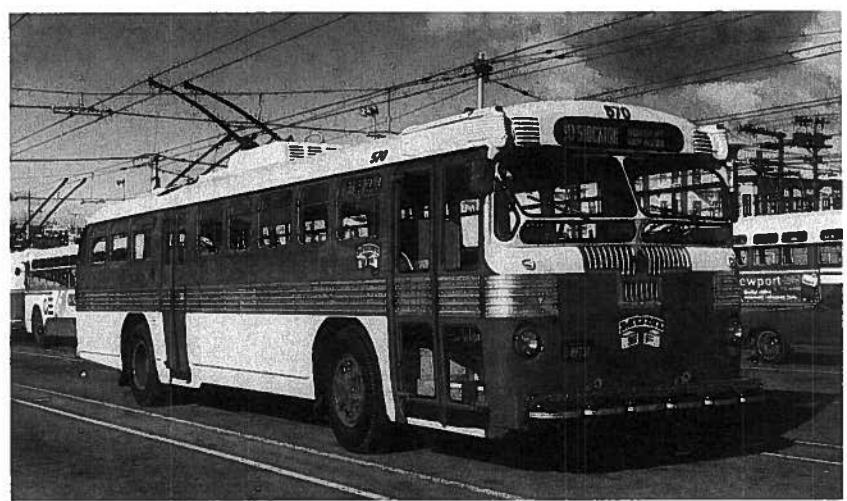

*Early heavy rail trains, such as this restored 1917 ceremonial train in New York City, were pretty spartan, lacking most of the amenities taken for granted today. Note the ceiling fans and non-recessed lights.*

*Many streetcar lines made an attempt at elegance. This restored San Antonio, Texas car has wooden seats, brass hardware, and interesting light fixtures.*

*The Presidents' Conference Committee (PCC) car was the industry's concerted attempt in the 1930s to standardize and modernize the numerous streetcar designs and win back riders. The Southeastern Pennsylvania Transportation Authority in Philadelphia operated this one.*

*A 1950s-era trolleybus manufactured by Twin Coach and formerly operated by the San Francisco Municipal Railway.*

TABLE 98 (continued)

**Milestones in U.S. Public Transportation History**

1940	first time bus ridership exceeded street railway ridership
1940	San Francisco becomes last surviving cable car transit agency
1941	New York, NY--first racially-integrated bus operator workforce
1943	Los Angeles--first rail line in expressway median (Pacific Electric Railway)
1943	New York--first issue of <i>Transit Fact Book</i> (then called "The Transit Industry of the United States, Basic Data and Trends")
1946	highest-ever public transportation ridership (23.4 billion)
1946	Washington-U.S. Supreme Court bans racial segregation in interstate transportation
1952	San Francisco--last new PCC car for U.S. transit agency placed in service
1958	Washington--authority to allow railroads to discontinue commuter passenger service transferred from states to U.S. Interstate Commerce Commission
1961	Washington--first significant federal public transportation legislation (Housing & Urban Development Act of 1961)
1962	Seattle--first monorail (Seattle World's Fair)
1962	New York--first automated heavy rail line (Grand Central Shuttle)
1963	Chicago becomes last surviving city with interurban line (Chicago, South Shore, & South Bend Railroad)
1964	Washington--first major U.S. government public transportation program (Urban Mass Transportation Act of 1964)
1966	New York--first public takeover of commuter railroad (Long Island Rail Road Co.)
1966	Providence--first statewide transit agency (Rhode Island Public Transit Authority)
1968	Washington--agency administering federal public transportation program re-named Urban Mass Transportation Administration and moved to new Department of Transportation
1968	Minneapolis--first downtown transit mall (Nicollet Mall)
1968	Cleveland--first rail station at an airport opened

166

TABLE 98 (continued)

**Milestones in U.S. Public Transportation History**

1969	Philadelphia--first modern heavy rail transit agency replacing former rail line (Port Authority Transit Corporation)
1969	Fort Walton Beach, FL--first dial-a-ride demand response transit agency
1970	Washington--first federally subsidized intercity passenger railroad (AMTRAK)
1971	San Francisco--first computer-controlled heavy rail transit agency (Bay Area Rapid Transit District)
1972	public transportation ridership hits all-time low (6.6 billion)
1972	Washington--some public transportation service required to be accessible to disabled (Rehabilitation Act of 1973)
1973	Washington--use of funds from cancelled Interstate Highway projects allowed for public transportation
1973	Boston, Dayton, OH, Philadelphia, San Francisco, & Seattle become last surviving trolleybus systems
1973	Boston, Cleveland, Newark, New Orleans, Philadelphia, Pittsburgh, & San Francisco become the last street railway systems
1974	Washington--first federal public transportation operating assistance legislation (National Mass Transportation Assistance Act of 1974)
1974	American Public Transit Association formed from merger of 2 organizations
1975	Morgantown, WV--first automated guideway transit agency (West Virginia University)
1977	San Diego--first wheelchair-lift-equipped fixed-route bus
1979	Washington--first standardized public transportation data accounting system (Section 15)
1980	San Diego--first completely new light rail transit agency in decades (San Diego Trolley)
1983	Washington--public transportation trust fund for capital projects created thru dedication of one cent of federal gas tax
1989	Miami--first completely new commuter rail transit agency in decades (Tri-County Commuter Rail Authority)
1990	Washington--virtually all public transportation service required to be accessible to disabled (Americans with Disabilities Act of 1990)
1991	Washington--one cent dedicated portion of federal fuel tax increased to 1.5 cents

167

TABLE 98 (continued)

**Milestones in U.S. Public Transportation History**

1991	Washington—federal government allowed to subsidize its employees' commuting costs
1991	Washington—first general authorization of use of highway funds for public transportation (Intermodal Surface Transp. Efficiency Act of 1991)
1992	Washington—first limitation on amount of tax-free employer-paid automobile parking benefits and tripling of value of tax-free benefit for public transportation use (National Energy Policy Strategy Act)
1993	Washington—public transportation workers in safety-sensitive positions subjected to drug and alcohol testing
1995	Washington—1.5 cents dedicated portion of federal fuel tax increased to 2 cents
1998	Washington—major expansion and restructuring of federal public transportation program (Transportation Equity Act for the 21 <sup>st</sup> Century)
2000	American Public Transit Association changes name to American Public Transportation Association

**SECTION XVII****Canadian Statistics**

*The Montreal Urban Community Transit Society operates the only rubber-tired rail system in the U.S. and Canada.*

Data in this section are extracted from the **Summary of Canadian Transit Statistics** and predecessor documents published each year by APTA's Canadian counterpart, the Canadian Urban Transit Association. Although definitions of terms are generally similar to U.S. terms, many are somewhat different, and comparison of Canadian and U.S. data can be misleading as a result.

Public transportation use in Canada (as well as in the rest of the world) has historically been much greater than the U.S. because it has a less automobile-dependent culture than the U.S. Consequently, measures of public transportation use will be considerably higher than the U.S.

**Canadian Fixed-Route Summary Statistics, Millions**

YEAR	NUMBER OF AGENCIES (a)	REVENUE PASSENGER TRIPS	VEHICLE MILES	NON-GOVT OPERATING FUNDING (b)	OPERATING EXPENSE (b)
1984	78	1,371.6	427.0	871.8	1,630.9
1985	70	1,434.1	444.4	932.0	1,680.4

North America's longest driverless automated rail system--nearly 18 miles long--is SkyTrain of Vancouver, British Columbia.

Canada also claims North America's most extensive system of dedicated busways--the City of Ottawa's transitways.

**SECTION XVIII****Definitions**

Definitions of terms defined by the Federal Transit Administration National Transit Database are from the latest NTD Reporting Manual. "(APTA)" indicates a term defined by APTA in the absence of an NTD definition.

**GENERAL**

**Commuter (APTA)**--A person who travels regularly between home and work or school.

**Intermodal (APTA)**--Those issues or activities which involve or affect more than one mode of transportation, including transportation connections, choices, cooperation and coordination of various modes. Also known as "multimodal."

**Mass Transit (APTA)**--Another name for "Mass Transportation" or "Public Transportation."

**Mass Transportation**--Transportation by bus, or rail, or other conveyance, either publicly or privately owned, providing to the public general or special service (but not including school buses or charter or sightseeing service) on a regular and continuing basis. Also known as "mass transit", "public transportation", and "transit".

**Multimode Transit Agency (APTA)**--A transit agency operating more than one mode of service.

**Multimodal (APTA)**--Another name for "intermodal".

**National Transportation System (APTA)**--An intermodal system consisting of all forms of transportation in a unified, interconnected manner to reduce energy consumption and air pollution while promoting economic development and supporting the Nation's preeminent position in international commerce. The NTS includes the National Highway System (NHS), public transportation and access to ports and airports.

**Public Transit Agency**--A public entity responsible for administering and managing transit activities and services. Public transit agencies can directly operate transit service or contract out for all or part of the total transit service provided.

**Public Transportation (APTA)**--Another name for "Mass Transportation" or "Transit."

**Reverse Commuting (APTA)**--Movement in a direction opposite the main flow of traffic, such as from the central city to a suburb during the morning peak period.

**Ridesharing (APTA)**--A form of transportation, other than a transit agency, in which more than one person shares the use of the vehicle, such as a van or car, to make a trip. Also known as "carpooling" or "vanpooling."

**Transit (APTA)**--Another name for "Mass Transportation" or "Public Transportation."

**Transit Agency (APTA)**--An entity (public or private) responsible for administering and managing transit activities and services. Transit agencies can directly operate transit service or contract out for all or part of the total transit service provided.

**Transit System (APTA)**--Another name for "Transit Agency."

## GEOGRAPHY

**Urban Place (APTA)**--A U.S. Bureau of the Census-designated area (less than 50,000 population) consisting of closely settled territory not populous enough to form an urbanized area.

**Urbanized Area (UZA)**--An area (50,000 or more population) so designated by the U.S. Bureau of the Census.

## INFRASTRUCTURE

**Accessible Station**--A public transportation passenger facility which provides ready access, is usable, and does not have physical barriers that

prohibit and/or restrict access by individuals with disabilities, including individuals who use wheelchairs.

**Bus Lane (APTA)**--Another name for "Busway".

**Busway**--A roadway reserved for buses only. It may be a grade separated or controlled access roadway. Also known as "Bus Lane".

**Commuter Lane (APTA)**--Another name for "High-Occupancy Vehicle Facility."

**Contraflow Lane (APTA)**--Reserved lane for buses on which the direction of bus traffic is opposite to the flow of traffic on the other lanes.

**Controlled Access Right-of-Way**--Lanes restricted for at least a portion of the day for use by transit vehicles and/or other high occupancy vehicles. Use of controlled access lanes may also be permitted for vehicles preparing to turn. The restriction must be sufficiently enforced so that 95 percent of vehicles using the lanes during the restricted period are authorized to use them.

**Exclusive Right-of-Way**--Roadway or other right-of-way reserved at all times for transit use and/or other high occupancy vehicles. The restriction must be sufficiently enforced so that 95 percent of vehicles using the right-of-way are authorized to use it.

**Fixed Guideway**--Any public transportation facility utilizing and occupying a separate right-of-way or rails for the exclusive use of public transportation service including, but not limited to, fixed rail, automated guideway transit, and exclusive facilities for buses and other high-occupancy vehicles; and also means a public transportation facility using a fixed catenary system and right-of-way useable by other forms of transportation.

**High-Occupancy Vehicle (HOV) Facility**--An exclusive or controlled access right-of-way which is restricted to high occupancy vehicles at all times or for a set period of time. The designation of a HOV facility is determined by state and/or local officials. Also called "busway," "transitway," or "commuter lane."

**Kiss and Ride Facility (APTA)**--A part of a park and ride facility where commuters who are passengers in non-transit vehicles are dropped off to board a mass transportation vehicle.

**Park and Ride Facility**--A parking garage and/or pavement used for parking passengers' automobiles, either free or for a fee, while they use transit agency facilities. Park-and-ride facilities are generally established as collector sites for rail or bus service. Park-and-ride facilities may also serve as collector sites for vanpools and carpools, and as transit centers.

**Station (APTA)**--A public transportation passenger facility.

**Transfer Point (APTA)**--A fixed location where passengers interchange from one route or vehicle to another that has little infrastructure--normally only shelters and/or benches.

**Transit Center (APTA)**--A fixed location where passengers interchange from one route or vehicle to another that has significant infrastructure such as a waiting room, benches, restrooms, sales outlet, ticket or pass vending machines, and/or other services.

**Transitway (APTA)**--Another name for "High-Occupancy Vehicle Facility."

## MODES

**Aerial Tramway**--Unpowered passenger vehicles suspended from a system of aerial cables and propelled by separate cables attached to the vehicle suspension system. The cable system is powered by engines or motors at a central location not on board the vehicle.

**Automated Guideway Transit**--Guided transit passenger vehicles operating singly or in multi-car trains with a fully automated system (no crew on transit units). Service may be on a fixed schedule or in response to a passenger-activated call button. Automated guideway transit includes personal rapid transit, group rapid transit and people mover systems.

**Bus**--Rubber-tired vehicles operating on fixed routes and schedules on roadways. Buses are powered by diesel, gasoline, battery or alternative fuel engines contained within the vehicle.

**Cable Car**--Streetcar type of passenger vehicles operating by means of an attachment to a moving cable located below the street surface and powered by engines or motors at a central location not on board the vehicle.

**Carpool (APTA)**--An arrangement where two or more people share the use and cost of privately owned vehicles in traveling together to and from pre-arranged destinations.

**Commuter Rail**--Long-haul rail passenger service operating between metropolitan and suburban areas, whether within or across the geographical boundaries of a state, usually characterized by reduced fares for multiple rides, and commutation tickets for regular, recurring riders. Also known as "regional rail" or "suburban rail."

**Demand Response**--Passenger cars, vans or buses with fewer than 25 seats operating in response to calls from passengers or their agents to the transit operator, who then dispatches a vehicle to pick up the passengers and transport them to their destinations. A demand response operation is characterized by the following: (a) The vehicles do not operate over a fixed route or on a fixed schedule except, perhaps, on a temporary basis to satisfy a special need; and (b) typically, the vehicle may be dispatched to pick up several passengers at different pick-up points before taking them to their respective destinations and may even be interrupted en route to these destinations to pick up other passengers. The following types of operations fall under the above definitions provided they are not on a scheduled fixed route basis: Many origins-many destinations, many origins-one destination, one origin-many destinations, and one origin-one destination. Also called "Dial-a-Ride" and "Paratransit."

**Dial-a-Ride (APTA)**--Another name for "Demand Response."

**Ferryboat**--Vessels carrying passengers and/or vehicles over a body of water. The vessels are generally steam or diesel-powered conventional ferry vessels. They may also be hovercraft, hydrofoil and other high speed vessels.

**Fixed-Route (APTA)**--Service provided on a repetitive, fixed-schedule basis along a specific route with vehicles stopping to pick up and deliver passengers to specific locations; each fixed-route trip serves the same origins and destinations, unlike demand response. Includes route deviation service, where revenue vehicles deviate from fixed routes on a discretionary basis.

**Heavy Rail**--High-speed, passenger rail cars operating singly or in trains of two or more cars on fixed rails in separate rights-of-way from which all other vehicular and foot traffic are excluded. Also known as "rapid rail," "subway," "elevated (railway)," or "metropolitan railway (metro)."

**Inclined Plane**--Special tramway type of vehicles operating up and down slopes on rails via a cable mechanism so that passenger seats remain horizontal while the undercarriage (truck) is angled parallel to the slope.

**Jitney**--Passenger cars or vans operating on fixed routes (sometimes with minor deviations) as demand warrants without fixed schedules or fixed stops.

**Light Rail**--Lightweight passenger rail cars operating singly (or in short, usually two-car, trains) on fixed rails in right-of-way that is not separated from other traffic for much of the way. Light rail vehicles are driven electrically with power being drawn from an overhead electric line via a trolley or a pantograph. Also known as "streetcar," "tramway," or "trolley car."

**Metropolitan Railway (APTA)**--Another name for "Heavy Rail."

**Mode**--A transit system category characterized by specific right-of-way, technological and operational features.

**Monorail**--Guided transit vehicles operating on or suspended from a single rail, beam or tube. Monorail vehicles usually operate in trains.

**Non-Fixed-Route (APTA)**--Service not provided on a repetitive, fixed-schedule basis along a specific route to specific locations. Demand response is the only non-fixed-route mode.

**Paratransit (APTA)**--Another name for "Demand Response."

**Rapid Rail (APTA)**--Another name for "Heavy Rail."

**Rapid Transit (APTA)**--Rail or bus transit service operating completely separate from all modes of transportation on an exclusive right-of-way.

**Regional Rail (APTA)**--Another name for "Commuter Rail."

**Suburban Rail (APTA)**--Another name for "Commuter Rail."

**Trolleybus**--Rubber-tired passenger vehicle operating singly on city streets. Trolleybuses are driven electrically with the power being drawn from an overhead electric line via trolleys. Also known as "trolley coach" or "trackless trolley."

**Urban Ferryboat (APTA)**--Ferryboats that have at least one terminal within an urbanized area, excluding international, rural, rural interstate, island, and urban park ferries.

**Vanpool**--Vans and/or buses seating less than 25 persons operating as a voluntary commuter ride sharing arrangement, which provides transportation to a group of individuals traveling directly between their homes and their regular places of work within the same geographical area. The vans should have a seating capacity greater than seven persons, including the driver. It is a mass transit service operated by a public entity, or in which a public entity owns, purchases, or leases the vehicles. Other forms of public participation to encourage ridesharing arrangements such as the provision of parking spaces, utilization of high occupancy vehicle (HOV) lanes, coordination or clearing house service, do not necessarily qualify as public vanpools.

## VEHICLES

**Accessible Vehicle**--Public transportation revenue vehicles which do not restrict access, are usable, and provide allocated space and/or priority seating for individuals who use wheelchairs.

**Active Vehicle**--The vehicles that are available to operate in revenue service, including vehicles temporarily out of service for routine maintenance and minor repairs.

**Aerial Tramway**--Unpowered passenger vehicles suspended from a system of aerial cables and propelled by separate cables attached to the vehicle suspension system. The cable system is powered by engines or motors at a central location not on board the vehicle.

**Automated Guideway Vehicle**--Guided transit passenger vehicles operating under a fully automated system (no crew on transit units).

**Bus**--Rubber-tired passenger vehicle powered by diesel, gasoline, battery or alternative fuel engine contained within the vehicle. Types include:

**Articulated Bus**--Extra-long (54 to 60 feet) bus with the rear body section connected to the main body by a joint mechanism. The joint mechanism allows the vehicle to bend when in operation for sharp turns and curves and yet have a continuous interior.

**Double Decked Bus**--High-capacity bus having two levels of seating, one over the other, connected by one or more stairways. Total bus height is usually 13 to 14.5 feet, and typical passenger seating capacity ranges from 40 to 80 people.

**Intercity Bus (APTA)**--A bus with front door only, separate luggage compartments, and usually with restroom facilities and high-backed seats for use in high-speed long-distance service.

**Suburban Bus (APTA)**--A bus with front doors only, normally with high-backed seats, and without luggage compartments or restroom facilities for use in longer-distance service with relatively few stops.

**Transit Bus (APTA)**--A bus with front and center doors, normally with a rear-mounted engine, low-back seating, and without luggage compartments or restroom facilities for use in frequent-stop service.

**Trolley Replica Bus (APTA)**--A bus with an exterior (and usually an interior) designed to look like a streetcar from the early 1900s.

**Cable Car**--Streetcar type of passenger vehicle operating by means of an attachment to a moving cable located below the street surface and powered by engines or motors at a central location not on board the vehicle.

**Commuter Rail Car**--Commuter rail passenger vehicle. There are two types:

**Commuter Rail Passenger Coach**--Not independently propelled and requiring one or more locomotives for propulsion.

**Commuter Rail Self-propelled Passenger Car**--Not requiring a separate locomotive for propulsion.

**Commuter Rail Locomotive**--Commuter rail vehicle used to pull or push commuter rail passenger cars. Locomotives do not carry passengers themselves.

**Downtown People Mover (APTA)**--A type of automated guideway transit vehicle operating on a loop or shuttle route within the central business district of a city.

**Ferryboat**--Vessel for carrying passengers and/or vehicles over a body of water. The vessel is generally a steam or diesel-powered conventional ferry vessel. It may also be a hovercraft, hydrofoil or other high speed vessel.

**Heavy Rail Car**--Rail car with motive capability, driven by electric power taken from overhead lines or third rails, configured for passenger traffic and usually operated on exclusive right-of-way.

**High Occupancy Vehicle (HOV) (APTA)**--Vehicles that can carry two or more persons. Examples of high occupancy vehicles are a bus, vanpool and carpool. These vehicles sometimes have exclusive traffic lanes called "HOV lanes," "busways," "transitways" or "commuter lanes."

**Inclined Plane Vehicle**--Special type of passenger vehicle operating up and down slopes on rails via a cable mechanism.

**Light Rail Vehicle**--Rail car with motive capability, usually driven by electric power taken from overhead lines, configured for passenger traffic and usually operating on non-exclusive right-of-way. Also known as "streetcar," "tramway," or "trolley car."

**Monorail Vehicle**--Guided transit passenger vehicle operating on or suspended from a single rail, beam or tube.

**Passenger Vehicle (APTA)**--A vehicle used to carry passengers in transit service.

**Rehabilitation**--The rebuilding of revenue vehicles to original specifications of the manufacturer. Rebuilding may include some new components but has less emphasis on structural restoration than would be the case in a remanufacturing operation, focusing on mechanical systems and vehicle interiors.

**Streetcar (APTA)**--Another name for "Light Rail Vehicle."

**Trackless Trolley (APTA)**--Another name for "Trolleybus."

**Tramway (APTA)**--Another name for "Light Rail Vehicle."

**Trolley Car (APTA)**--Another name for "Light Rail Vehicle."

**Trolley Coach (APTA)**--Another name for "Trolleybus."

**Trolleybus**--Rubber-tired electrically powered passenger vehicle operating on city streets drawing power from overhead lines with trolleys. Also known as "trolley coach" or "trackless trolley."

**Van**--Vehicles having a typical seating capacity of 5 to 15 passengers and classified as a van by vehicle manufacturers. A modified van is a standard van which has undergone some structural changes, usually made to increase its size and particularly its height. The seating capacity of modified vans is approximately 9 to 18 passengers.

## OPERATING EXPENSES

**Function**--A function is the activity performed or cost center of a transit agency. There are four basic functions, as follows:

**Vehicle Operations**--All activities associated with the subcategories of the vehicle operations function: transportation administration and support; revenue vehicle operation; ticketing and fare collection; and system security.

**Vehicle Maintenance**--All activities associated with revenue and non-revenue (service) vehicle maintenance, including administration, inspection and maintenance, and servicing (cleaning, fueling, etc.) vehicles. In addition, vehicle maintenance includes repairs due to vandalism and accident repairs of revenue vehicles.

**Non-Vehicle Maintenance**--All activities associated with facility maintenance, including: administration; repair of buildings, grounds and equipment as a result of accidents or vandalism; operation of electric power facilities; and maintenance of vehicle movement control systems; fare collection and counting equipment; structures; tunnels and subways; roadway and track; passenger stations; operating station buildings, grounds and equipment; communication systems; general administration buildings, grounds and equipment; and electric power facilities.

**General Administration**--All activities associated with the general administration of the transit agency, including transit service development, injuries and damages, safety, personnel administration, legal services, insurance, data processing, finance and accounting, purchasing and stores, engineering, real estate management, office

management and services, customer services, promotion, market research and planning.

**Operating Expense**--The expenses associated with the operation of the transit agency, and classified by function or activity and the goods and services purchased. It is the sum of "Vehicle Operations," "Vehicle Maintenance," "Non-Vehicle Maintenance," and "General Administration." Alternatively, it is the sum of the various object classes listed below.

**Object Class**--An object class is a grouping of expenses on the basis of goods and services purchased. Object Classes are as follows:

**Salaries and Wages**--The pay and allowances due employees in exchange for the labor services they render in behalf of the transit agency. The allowances include payments direct to the employee arising from the performance of a piece of work. Also called "Labor."

**Labor**--Another name for "Salaries and Wages."

**Fringe Benefits**--The payments or accruals to others (insurance companies, governments, etc.) on behalf of an employee and payments and accruals direct to an employee arising from something other than a piece of work. These payments are transit agency costs over and above labor costs, but still arising from the employment relationship. Fringe benefits include retirement, pension, medical, dental, life insurance and short-term disability plans; unemployment insurance; workers' compensation insurance; sick, holiday, vacation, and other paid leave; and, uniform and work clothing allowances.

**Employee Compensation (APTA)**--Sum of "Salaries and Wages" and "Fringe Benefits."

**Services**--The labor and other work provided by outside organizations for fees and related expenses. In most instances, services from an outside organization are procured as a substitute for in-house employee labor, except in the case of independent audits which could not be performed by employees in the first place. The substitution is usually made because the skills offered by the outside organization are needed for only a short period of time or are better than internally available skills. The charge for these services is usually based on the labor hours invested in performing the service. Services include management service fees, advertising fees, professional and technical

services, temporary help, contract maintenance services, custodial services and security services.

**Materials and Supplies**--The tangible products obtained from outside suppliers or manufactured internally. Freight-in, purchase discounts, cash discounts, sales and excise taxes (except on fuel and lubricants) are to be included in the cost of the material or supply. Charges to these expense accounts will be for the materials and supplies issued from inventory for use and for the materials and supplies purchased for immediate use, i.e., without going through inventory. Three types are:

**Fuel and Lubricants**--The costs of gasoline, diesel fuel, propane, lubricating oil, transmission fluid, grease, etc., for use in vehicles.

**Tires and Tubes**--The lease payments for tires and tubes rented on a time period or mileage basis, or the cost of tires and tubes for replacement of tires and tubes on vehicles.

**Other Materials and Supplies (APTA)**--Materials and supplies other than fuel and lubricants and tires and tubes.

**Utilities**--The payments made to various utilities for utilization of their resources (e.g., electric, gas, water, telephone, etc.). Utilities include propulsion power purchased from an outside utility company and used for propelling electrically driven vehicles, and other utilities such as electrical power for purposes other than for electrically driven vehicles, water and sewer, gas, garbage collection, and telephone.

**Casualty and Liability**--The cost elements covering protection of the transit agency from loss through insurance programs, compensation of others for their losses due to acts for which the transit agency is liable, and recognition of the cost of a miscellaneous category of corporate losses. The costs of repairing damaged property are recorded in labor, fringe benefit, material and services object classes. The costs of writing off property damaged beyond repair are recorded in the depreciation object class. The costs of transit agency employees engaged in insuring and processing claims for and against the transit agency are recorded in labor and fringe benefit object classes. Casualty and liability costs include premiums for physical damage insurance, recoveries of physical damage losses, premiums for public liability and property damage insurance, payouts for and recoveries from insured and uninsured public liability and property

damage settlements, and premiums for other corporate insurances (e.g., fidelity bonds, business records insurance, etc.).

**Purchased Transportation**--The payment or accrual to other transit agencies, public or private, for providing transportation service including fare revenues retained by the seller, other expenses incurred by the buyer of service, and other expenses incurred by the seller of service when the purchased transportation agreement pays for only part of the costs.

**Other (APTA)**--The sum of taxes, miscellaneous, and expense transfers expenses:

**Taxes**--The taxes levied against the transit agency by Federal, State and Local governments. Sales and excise taxes on materials and services purchased other than fuel and lubricants are not included in this category but are to be accounted for as part of the base price of the material or service. Taxes include income, property, fuel and lubricant, and electric propulsion power taxes; and, vehicle licensing and registration fees.

**Miscellaneous Expenses**--The expenses which cannot be attributed to any of the other major expense categories.

**Expense Transfers**--Accounts to be used for reporting adjustments and reclassifications of expenses previously reported. Expense transfers include reclassifications of expenses from one function to another; a composite category of expense encompassing labor, fringe benefits, materials and services used in the transit agency's internal information system to reclassify costs between cost centers and work orders; and, a credit account to be used for adjusting entries transferring expenses to receivables, property, or work-in-process for capital projects.

**Depreciation and Amortization**--The charges that reflect the loss in service value of the transit agency's assets. Depreciation and amortization include the depreciation of the physical facilities such as guideways, tracks and roadbeds, elevated structures, passenger stations and parking facilities, revenue vehicles, operating stations, and facilities (including buildings, equipment and furnishings) for power generation and distribution, revenue vehicle movement control, data processing, revenue collection and processing, and other general administration. Amortization of the intangible costs of the transit

agency includes organization costs, franchises, patents, goodwill and other intangible assets.

**Other Reconciling Items** (APTA)--All other expenses in addition to "Total Operating Expense" and "Depreciation and Amortization" including interest expense, leases and rentals, purchase lease payments, related parties lease agreements, and any other costs.

**Total Expense** (APTA)--The sum of "Total Operating Expense," "Depreciation and Amortization," and "Other Reconciling Items."

## OPERATING FUNDING

**Operating Funding Source** (APTA)--Funds used to pay for operating expense.

**Government Funds** (APTA)--Funds provided by federal, state, and/or local governments. For some purposes, also includes directly generated taxes, tolls, fees, and other imposed funding sources.

**Federal Funds**--Financial assistance from the federal government to assist in paying the operating costs of providing transit service.

**State Funds**--Financial assistance from a state government(s) to assist with paying the operating costs of providing transit service.

**Local Funds**--Financial assistance from local governments (below the state level) to help cover the operating costs of providing transit service.

**Directly Generated Funds**--Any funds generated by or donated directly to the transit agency, including passenger fares, advertising revenues, donations and grants from private foundations. Directly generated funds also include directly levied taxes and other funds dedicated to transit, such as development fees where the transit agency has the legal authority to impose the development fees.

**Passenger Fares**--The revenue earned from carrying passengers in regularly scheduled service. Passenger fares include the base fare, zone premiums, express service premiums, extra cost transfers and quantity purchase discounts applicable to the passenger's ride. They also include revenues earned but paid for by some organization rather than the rider,

and for rides given along special routes for which revenue may be guaranteed by a beneficiary of the service. They include revenue from services operated directly by the transit agency as well as service operated by purchased transportation contractors.

**Adult Base Cash Fare** (APTA)--Minimum cash fare paid by an adult for one transit ride; excludes transfer charges, zone or distance charges, express service charges, peak period surcharges, and reduced fares.

**Passenger Fares Received per Unlinked Passenger Trip** (APTA)--"Passenger Fares" divided by "Unlinked Passenger Trips."

**Peak Period Surcharge** (APTA)--An extra fee required during peak periods (rush hours).

**Transfer Surcharge** (APTA)--An extra fee charged for a transfer to use when boarding another transit vehicle to continue a trip.

**Zone or Distance Surcharge** (APTA)--An extra fee charged for crossing a predetermined boundary.

**Other Operating Funds** (APTA)--The sum of school bus service revenues, freight tariffs, charter service revenues, auxiliary transportation revenues, non-transportation revenues, revenue accrued through a purchased transportation agreement, and subsidy from other sectors of operations:

**School Bus Service Revenues**--The revenue earned operating vehicles under school bus contracts. School bus service is the operation of buses exclusively to carry school passengers to and from their schools.

**Freight Tariffs**--The revenue earned from carrying all types of freight on runs whose primary purpose is passenger operations.

**Charter Service Revenues**--The revenue earned operating vehicles under charter contracts. Charter service is the operation of vehicles hired for exclusive use and that do not operate over a regular route, on a regular schedule and are not available to the general public.

**Auxiliary Transportation Revenues**--The revenue earned from operations closely associated with transportation operations. Revenue

includes station concessions, vehicle concessions, advertising and automotive vehicle ferriage.

**Non-Transportation Revenues**--The revenue earned from activities not associated with the provision of transit service. Non-transportation revenues include revenues earned from sales of maintenance service on property not owned or used by the transit agency, rentals of revenue vehicles to other operators, rentals of transit agency buildings and property to other organizations, parking fees generated from parking lots not normally used as park and ride locations, and donations.

**Revenue Accrued through a Purchased Transportation Agreement**--Revenue accrued by a seller of transportation services through purchased transportation agreements. These are the contract revenues earned (payments and accruals) by a transit agency under contract to another transit agency or governmental unit.

**Subsidy from Other Sectors of Operations**--The funds obtained from other sectors of a transit agency's operations to help cover the cost of providing transit services.

## CAPITAL EXPENSES

**Capital Expense**--The expenses related to the purchase of tangible property or other items eligible to be capitalized (e.g., vehicle tire leasing). Property includes tangible assets with an expected service life of more than one year at the time of their installation, and a unit cost greater than \$1,000. Generally, these are any items eligible as a capital expense under federal, state or local requirements.

**Rolling Stock**--The revenue vehicles used in providing transit service for passengers. The term revenue vehicles includes the body and chassis and all fixtures and appliances inside or attached to the body or chassis, except fare collection equipment and revenue vehicle movement control equipment (radios). For rubber-tired vehicles, it includes the cost of one set of tires and tubes to make the vehicle operational, if the tires and tubes are owned by the transit agency.

**Facilities**--The following items are facility and facility-related projects: construction of maintenance facilities (including design and engineering, demolition, etc.); rehabilitation of maintenance facilities (including design

and engineering, land acquisition, relocation, etc.); crime prevention and security equipment; purchase or installation of service and support equipment; operational support (computer hardware and software, bus diagnostic equipment, and other activities that enhance system operations and efficiency while reducing operating costs); transit malls, transfer facilities, intermodal terminals, shelters, passenger stations, depots, terminals, HOV facilities, transit ways, and park-and-ride facilities; and track; line equipment and structures; signals and communications; and power equipment and substations.

**Other**--Any other item not described above, such as service vehicles, construction of general administration facilities, furniture, equipment that is not an integral part of buildings and structures, data processing equipment (including computers and peripheral devices whose sole use is in data processing operations), fare collection equipment, and revenue vehicle movement control equipment.

## CAPITAL FUNDING

**Capital Funding Source (APTA)**--Funds used to pay for capital expense.

**Government Funds (APTA)**--Funds provided by federal, state, and/or local governments. For some purposes, also includes directly generated taxes, tolls, fees, and other imposed funding sources.

**Federal Funds**--Financial assistance from the federal government to assist in paying the capital costs of providing transit service.

**State Funds**--Financial assistance from a state government(s) to assist with paying the capital costs of providing transit service.

**Local Funds**--Financial assistance from local governments (below the state level) to help cover the capital costs of providing transit service.

**Directly Generated Funds**--Any funds generated by or donated directly to the transit agency, including passenger fares, advertising revenues, donations and grants from private foundations. Directly generated funds also include directly levied taxes and other funds dedicated to transit, such as development fees where the transit agency has the legal authority to impose the development fees.

## EMPLOYEES

**Capital Employee**--The employee labor hours whose cost is reimbursed under a capital grant or is otherwise capitalized.

**Operating Employee**--The employees engaged in the operation of the transit system. They are:

**General Administration Employee**--Executive, professional, supervisory, and secretarial transit system personnel engaged in general management and administration activities: preliminary transit system development, customer services, promotion, market research, injuries and damages, safety, personnel administration, general legal services, general insurance, data processing, finance and accounting, purchasing and stores, general engineering, real estate management, office management and services, general management, and planning.

**Non-Vehicle Maintenance Employee**--Executive, professional, supervisory, and secretarial transit system personnel engaged in non-vehicle maintenance, personnel providing maintenance support to such personnel for inspecting, cleaning, repairing and replacing all components of: vehicle movement control systems; fare collection and counting equipment; roadway and track; structures, tunnels, and subways; passenger stations; communication system; and garage, shop, operating station, general administration buildings, grounds and equipment. In addition, it includes support for the operation and maintenance of electric power facilities.

**Other Vehicle Operations Employee**--Executive, professional, and supervisory transit system personnel engaged in vehicle operations, personnel providing support in vehicle operations activities, personnel engaged in ticketing and fare collection activities, and personnel engaged in system security activities.

**Vehicle Maintenance Employee**--Executive, professional, secretarial, and supervisory transit system personnel engaged in vehicle maintenance, personnel performing inspection and maintenance, vehicle maintenance of vehicles, performing servicing functions for revenue and service vehicles, and repairing damage to vehicles resulting from vandalism or accidents.

**Vehicle Operator**--The personnel (other than security agents) scheduled to be aboard vehicles in revenue operations including vehicle operators, conductors, and ticket collectors.

## PASSENGERS

**Average Trip Length (APTA)**--Passenger miles divided by unlinked passenger trips.

**Passenger Miles**--The cumulative sum of the distances ridden by each passenger.

**Revenue Passenger Trips (APTA)**--The number of fare-paying transit passengers with each person counted once per trip; excludes transfer and non-revenue trips.

**Unlinked Passenger Trips**--The number of passengers who board public transportation vehicles. A passenger is counted each time he/she boards a vehicle even though he/she may be on the same journey from origin to destination.

## SERVICE PROVIDED

**Average Speed (APTA)**--Vehicle miles divided by vehicle hours.

**Directional Route Miles**--The mileage in each direction over which public transportation vehicles travel while in revenue service. Directional route miles are a measure of the facility or roadway, not the service carried on the facility, i.e., number of routes or vehicle revenue miles. Directional route miles are computed with regard to direction of service, but without regard to the number of traffic lanes or rail tracks existing in the right-of-way.

**Miles of Track**--The number of tracks per one-mile segment of right-of-way. Miles of track are measured without regard to whether or not rail traffic can flow in only one direction on the track. All track is counted, including yard track.

**Total Bus Mile Equivalents (APTA)**--The number of vehicle miles that would have been operated by a transit mode if the service had been

provided by buses. Based on average seating plus standing capacity of the vehicle as compared to the capacity including standees (70 people) of a standard-size bus.

**Vehicle Hours**--The hours a vehicle travels while in revenue service (vehicle revenue hours) plus deadhead hours. For rail vehicles, vehicle hours refer to passenger car hours. Vehicle hours exclude hours for charter services, school bus service, operator training and maintenance testing.

**Vehicle Miles**--The miles a vehicle travels while in revenue service (vehicle revenue miles) plus deadhead miles. For rail vehicles, vehicle miles refer to passenger car miles. Vehicle miles exclude miles for charter services, school bus service, operator training and maintenance testing.
